1.0 SUMMARY

TIM MILLER ASSOCIATES, Inc. (TMA) completed a Phase I / Phase II Environmental Site Assessment (ESA) of the Gateway Development property ("Property") at the request of North 80 LLC during the months of May to July 2019. The Property consists of eight (8) tax lots, approximately 79.15 acres in size and is located north of Hospital Road in Mount Pleasant, Westchester County, New York. The subject property is shown in Figure 1 – Site Plan.

This Phase I /Phase II Environmental Assessment was prepared for North 80 LLC in accordance with the standard Phase I Environmental Assessment protocol promulgated by the American Society for Testing and Materials (ASTM E-1527-13). In addition to the standard Phase 1 protocol, soil sampling with a backhoe and test pits was completed at the site.

A previous Phase 1 Environmental Assessment update completed by Team Environmental Consultants (March 27, 2017) was provided by the client and relevant information from that assessment is referenced and described in this report.

The key elements of this Phase I / Phase II assessment involved an investigation into the history and physical setting of the Property and adjacent areas including: current and past land uses and activities, disposal practices, available utilities, and a review of available historic and contemporary mapping to determine past or current land uses which may impact the Property. In addition, regulatory agency documents were reviewed to determine spills, petroleum bulk storage, hazardous waste generators in the vicinity of the Property.

Review of potential subsurface contamination focused primarily upon past and present residential and commercial activities associated with the storage and handling of bulk quantities of chemicals, petroleum products, and waste products. Specifically, the presence of underground or aboveground tanks was investigated, as well as Property and area disposal practices.

This Phase 1 / Phase II assessment has found recognized environmental conditions on or near the subject Property that have the potential to affect the Property.

The recognized environmental conditions include:

1) *Six underground fuel oil tanks associated with the onsite residences are in-use on the property. Although five of the tanks were tightness tested in 2010, the tanks' current condition cannot be determined.*

2) *A 275-gallon aboveground fuel oil tank is located adjacent to the garage at 48A Saw Mill River Road. The tank appeared in good condition with no observed leaks or spills but it had no secondary containment.*

3) *Several 55-gallon drums of ethylene glycol were observed in two garages from the former Nilsson Nurseries.*

2.0 INTRODUCTION

2.1 PURPOSE

The purpose of this investigation was to provide a preliminary evaluation of the potential environmental risks associated with the Property. The investigation was performed in general accordance with ASTM E 1527-13 “Environmental Site Assessments”, in order to provide “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice.”

2.2 SCOPE

TMA performed the following tasks within the scope of this investigation:

1. Reviewed available maps, aerial photographs, and property records to establish the land use history of the Property as well as the environmental and hydrogeological setting of the property.
2. Reviewed information regarding the environmental condition and history of the Property and abutting properties from federal, state, and local sources. The review included a previous Phase 1 Environmental Site Assessment update prepared by Team Environmental (March 27, 2017).
3. Performed a site reconnaissance for observations indicating the potential use, storage or dumping of hazardous materials or wastes on the Property or adjacent properties.
4. Interviewed the current Property owner representatives, Mr. Neil DeLuca (western seven parcels) and Mr. Anthony Zaino (eastern Westchester County parcel) regarding any environmental issues that they may be aware of regarding the Property.5.Completed soil sampling at the site with a backhoe excavator. Test pits of historic fill material were completed at ten (10) locations and samples collected at another five (5) locations. A total of 15 samples of historic fill were collected and analyzed. Five samples of recent construction fill from the Westchester Medical Center were collected and analyzed. The results of the sampling are discussed in this Phase 1 report.
6. Prepared a Phase I /Phase II Environmental Site Assessment Report summarizing the findings and conclusions of this investigation.

2.3 SIGNIFICANT ASSUMPTIONS

The conclusions found in this report are based, in part, on studies, data, and background information provided by others. Tim Miller Associates makes no guarantees as to the accuracy or completeness of this information.

In order to determine whether certain environmental conditions may impact the subject Property, TMA makes reasonable assumptions regarding the probable (inferred) groundwater flow direction. These assumptions are based on information provided by standard United States Geologic Survey Topographic maps, other topographic surveys and on-site drainage conditions. These sources do not include groundwater elevations or gradients. In order to determine actual groundwater elevations and flow directions,

site specific hydrogeologic testing is required, such as the installation of monitoring wells and groundwater gradient mapping. Such activities are beyond the scope of a Phase 1 ESA performed in accordance with ASTM E 1527-13. Groundwater conditions may also vary due to seasonal changes, precipitation, well influences, and variations in soil and bedrock geology.

2.4 LIMITATIONS & EXCEPTIONS

This report has been prepared for the exclusive use of North 80 LLC for specific application to the listed Property with the sole purpose of providing a preliminary evaluation of the potential environmental risks associated with the property. No other warranty, expressed or implied, is made as to the professional advice included in this report. This investigation is intended to provide the user with a preliminary evaluation of the Property's environmental conditions.

The scope of services associated with this Phase I / Phase II Environmental Site Assessment did not include items such as the performance of water sampling and testing, asbestos sampling or testing, wetland delineation, or the investigation of environmental issues regarding radon. As indicated, soil samples were collected and analyzed as part of this investigation and the results are described in this report.

2.5 SPECIAL TERMS & CONDITIONS

Our professional services have been performed using the degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental scientists practicing in this or similar situations.

2.6 USER RELIANCE

Reasonable care has been taken by TMA in checking information arrived at through interviews and any other secondary sources of data. However, TMA disclaims any and all liability for errors, omissions, or inaccuracies in such information and for any consequences arising therefrom or from errors, omissions, or inaccuracies arising from circumstances connected with the subject project that cannot be ascertained through standard visual reconnaissance techniques.

Any and all liability on the part of TMA shall be limited solely to the cost of this survey report. TMA shall have no liability for any other damages, whether consequential, compensatory, punitive, or special, arising out of, incidental to, or as a result of, this survey and report. Tim Miller Associates assumes no liability for the use of this survey or report by any person or entity other than the individual or institution for whom it has been prepared.

We represent that observations made in this report are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and inspections have been carried to a level that meets accepted industry and professional standards. Nevertheless, TMA shall have no liability or obligation to any party other than to North 80 LLC and TMA's obligations and liabilities are limited to fraudulent statements made, or negligent or willful acts or omissions.

3.0 SITE DESCRIPTION

3.1 LOCATION & LEGAL DESCRIPTION

The Property consists of 79.15 acres in the Town of Mount Pleasant, Westchester County, New York and is designated as tax map numbers:

- 116.08-1-3 through 11.08-1-9, and
- 11.20-1-80

The Property is located on the north side of Hospital Road, east of Saw Mill River road and south of West Stevens Avenue. The property and tax parcels are shown in Figure 1 – Aerial Photograph.

3.2 PROPERTY & VICINITY GENERAL CHARACTERISTICS

The current topographic map [White Plains, NY, 2013 (Scale: 1:24,000)] shows the Property as located in a developed suburban area. The property is located in an area of mixed residential, hospital and commercial uses.

The property contains varied topography, with higher elevations in the southeast corner and lowest elevations in the northwest corner. The property is crossed by two north-south trending stream corridors with more level ground in the central portion of the site. A topographic map of the site and environs is provided in Appendix D. According to the Town of Mount Pleasant zoning map the subject Property is located in two zoning districts: the largest parcel (11.08-1-9) is located in the PRDH-T1 Planned Residential Historic Development Transitional district and the western portion of the property is in the OB-6 Office Building Distribution, Limited Fabrication district.

3.3 CURRENT USE OF PROPERTY

The Property is mostly undeveloped with areas of mature woods and overgrown agricultural fields. Six residences are located on the site, with five occupied homes in the western portion of the site near Saw Mill River Road. A parking lot is located off of Hospital Road near Woods Road in the southern portion of the site. A level area north of the parking lot is currently used to store fill material and construction equipment for the construction of additions to the Westchester Medical Center. The Property was not identified as a hazardous materials generator or storage site in the environmental regulatory database review.

3.4 CURRENT USES OF ADJOINING PROPERTIES

The properties adjoining the Property are residential, commercial and County owned. During the site reconnaissance, TMA noted the following adjacent property uses:

- **North:** The Property is bordered to the north by West Stevens Avenue and a single-family residential neighborhood. The western portion of the site is bordered by Old Saw Mill River Road and two restaurants.

- **South:** The Property is bordered to the south by the Westchester Medical Center hospital complex.

- **West:** The Property is bordered to the west by professional office buildings and warehouse space.

- **East** The property is bordered to the east by the Sprain Brook Parkway and further to the east by a small Town owned park.

The surrounding development appears consistent with existing zoning.

4.0 CLIENT PROVIDED INFORMATION

4.1 ENVIRONMENTAL LIENS OR ACTIVITY & USE LIMITATIONS

The client did not provide any deed information to assist in the evaluation of possible environmental liens or restrictions on the Property. In addition, no documentation was found during this investigation that any such conditions exist.

4.2 SPECIALIZED KNOWLEDGE

The client did not provide any specialized knowledge about the Property. A previous Phase 1 Environmental Assessment update completed by Team Environmental Consultants (March 27, 2017) was provided by the client and relevant information from that assessment is referenced and described in this report.

4.3 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

The client did not provide any information regarding any valuation reduction of the Property for environmental reasons.

4.4 REASON FOR PERFORMING PHASE 1 ESA

The investigation was performed in accordance with ASTM E 1527-13 “Environmental Site Assessments”, in order to provide “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice.”

5.0 RECORDS REVIEW

5.1 TITLE RECORDS

A title search was not requested or performed for this Environmental Assessment. The information listed here was obtained from the Town of Mount Pleasant Assessor’s Office and Building Department. The Property is designated as eight tax parcels: 116.08-1-3 through 116.08-1-9, and 111.20-1-80. The current owners are listed as 81 Holly Hill Lane LLC (western seven parcels) and Westchester County (eastern parcel 116.08-1-9).

5.2 ENVIRONMENTAL DATABASE REPORT

Environmental Data Resources, Inc. (EDR) conducted a search of available environmental records for the Property and ASTM specified areas surrounding the property. The search met the specific requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-13. The report containing the findings of this search is attached to this report (see Appendix A).

The following types of databases were plotted within the ASTM E 1257-05 search radii:

National Priorities List (NPL) and Proposed NPL Sites

The NPL List, also known as the Superfund List, is a USEPA listing of uncontrolled or abandoned hazardous waste sites. The list is primarily based on a score that the Property receives from the EPA's Hazardous Ranking System. These sites are targeted for possible long-term remedial action under the Superfund Act. *According to the ASTM standard, the minimum search distance is one-mile from the subject property.*

No NPL sites were identified within the 1.0-mile search radius from the subject Property.

Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)

The CERCLIS list is a compilation of known and suspected uncontrolled or abandoned hazardous waste sites. These sites have been investigated, or are currently under investigation by the EPA, for the release, or threatened release of hazardous substances. Once a site is placed on the CERCLIS report, it may be subjected to several levels of review and evaluation, and ultimately placed on the National Priorities List. *According to the ASTM standard, the minimum search distance is 0.5-mile from the subject property.*

No CERCLIS sites were identified within the 0.5-mile search radius from the Property.

NYS Hazardous Waste Disposal Site Registry (SHWS)

State hazardous waste lists are the state's equivalent to CERCLIS described above. This is a state listing of sites that can pose environmental or public health hazards requiring investigation or cleanup. *According to the ASTM standard, the minimum search distance is one-mile from the subject property.*

One SHWS sites was identified within the 1.0-mile search radius from the subject Property. The listed site was identified as: One Commerce Park, 115 Wall Street, approximately 0.84 miles southeast of the site. Chlorinated solvents were found in groundwater at this site resulting from former industrial activity. Given the distance and downgradient location of this site, it is not expected to impact the subject site.

Emergency Response Notification System (ERNS)

ERNS is a national computer database system that is used to store information on the release of hazardous substances into the environment. The ERNS reporting system contains preliminary information on specific releases, including the spill location, the substance released, and the responsible party. *According to the ASTM standard, the minimum search distance is the subject property.*

The subject Property is not listed on the ERNS reporting system.

NYS Solid Waste Facility/Landfill Sites Register (SWF/LF)

The NYS Solid Waste Facility Register is a comprehensive listing of all permitted solid waste landfills and processing facilities currently operating within New York State.

According to the ASTM standard, the minimum search distance is 0.5-mile from the subject property.

No SWF/LF sites were identified within the 1.0-mile search radius from the Property.

Resource Conservation and Recovery Information System (RCRIS)
RCRA Hazardous Waste Data Management System

The USEPA's Resource Conservation and Recovery Information System (RCRIS) report of large, small quantity generators and conditionally exempt small quantity generators (LQG, SQG and CESQG); treatment, storage, and disposal (TSD) facilities; and transporters contains information pertaining to those facilities that are required to register their hazardous waste activity under the Resource Conservation and Recovery Act. Such facilities are of concern when they are *not* RCRA-compliant. *According to the ASTM standard, the minimum search distance for transporters, storers and disposal of hazardous wastes is one-mile from the subject property. For generators, the minimum search distance is the property and adjoining properties (within 0.25-miles of the target Property).*

Two large quantity generators (LQG) were identified within the ASTM search radius from the Property, listed as: Con Edison for PCB related waste from a pole transformer (0.13 miles from the subject site and Westchester Medical facility at 100 Woods Road approximately 0.212 miles from the site. This facility disposed of solvents, organic compounds and metals. No violations were reported at the facility.

Two small quantity generators (SQG) were identified in the industrial office park directly west of the site: Pepsico and ABB Optical Group, at 3 and 4 Skyline Drive, respectively. No RCRA violations were reported for these facilities.

Four conditionally exempt small quantity generators were identified within one-quarter mile from the site, all located in the industrial office park west of the site on Skyline Drive. No violations were reported for these facilities.

NYS Registered Storage Tanks

Underground storage tanks (USTs) are regulated under RCRA and must be registered with the state department responsible for administering the UST program. *According to the ASTM standard, the minimum search distance for registered USTs is the subject property and adjoining properties.*

Seven (7) New York State Department of Environmental Conservation (NYSDEC) registered underground storage tank (USTs) sites were identified within a 0.25-mile radius from the Property, including the former Nilsson Nurseries, where underground tanks have been removed.

Westchester Medical facility at 100 Woods Road According to the database the adjoining property has seven (7) registered underground tanks and twelve (12) aboveground tanks. The listed tanks appear to be monitored and tested.

The database indicates that four underground tanks registered for the former Nilsson Nurseries, 48 Saw Mill River Road, have been closed as of January 2001. The tank

closure and a reported spill related to the 1,000-gallon gasoline tank, is further described in the discussion of spills, below.

New York Chemical Bulk Storage Tanks/New York Major Oil Storage Facilities Database (MOSF)

The New York Chemical Bulk Storage Report contains information pertaining to facilities that store regulated substances in aboveground storage tanks (ASTs) with capacities of 185 gallons or greater, and/or underground storage tanks of any size. *According to the ASTM standard, the minimum search distance for bulk storage tanks is 0.25-mile from the subject property.*

The Westchester County Water District No. 3 facility is listed as a storage location for sodium hydrochloride. The location of the facility is unclear from the database.

NY Brownfields Sites

The New York Brownfields list is a list of sites that under the Environmental Restoration Program the State provides grants to reimburse costs for site investigation and remediation activities. Once a Brownfields site is remediated it can be reused for commercial, industrial, residential, or public uses. *The search distance available within the historic environmental report is 0.5-miles from the subject Property.*

No NY Brownfields sites were listed within a 0.5-mile radius of the subject Property.

New York Leaking Storage Tanks /New York Spills List

The New York State Leaking Storage Report is a comprehensive listing of all leaking storage tanks reported to the NYSDEC. In New York State, spills are also listed on Leaking Underground Storage Tank list. *According to the ASTM standard, the minimum search distance for leaking underground tanks is 0.5-mile and the minimum search distance for New York State Spills is 0.125-miles.*

The database indicates that 37 leaking tank incidents were reported within 0.5 miles from the subject site and 17 DEC spill incidents were reported within one-quarter mile from the subject site.

A spill was reported in January 2000 for the Nilsson Nurseries related to the removal of two underground storage tanks. According to the database soil contamination was observed during the tank removal. The former Nilsson Nurseries property is at the western edge of the subject property. According to the Team Environmental Phase *1 ESA Review & Database Update Report* (March 27, 2017) approximately one-dump-truck load of impacted soil was removed and transported from the site. The spill incident was closed on February 1, 2001.

Interviews conducted by Team Environmental and documentation cited in their March 27, 2017 *Phase 1 Update Report* indicate that the petroleum release was remediated to the satisfaction of Westchester County and therefore no longer impacts the subject property (see Appendix F). The closed spill incident is considered a Historic Recognized Environmental Condition (HREC).

Seven (7) leaking tank incidents were reported for the nearby NY Medical College located south of the subject site. These spills occurred between 1987 and 1999. All of the incidents have been closed.

All of the listed NYSDEC spill case numbers listed above have been closed, indicating that the spill cases no longer have clean-up requirements or regulatory involvement with the NYSDEC. Tim Miller Associates has reviewed the location and circumstances of the leaking tanks and spill cases, as reported in the database. Given the closed status and locations of the listed leaking tanks and spill incidents, these spills are not expected to have impacted the subject Property.

Unplottable Sites

The regulatory agency database review includes a listing of sites, which cannot be plotted on a map due to limited information on their geographic location. As part of this review, TMA has reviewed this list to determine whether any of these sites represent a potential hazard to the subject Property. Following the review, the listed unplottable sites are not expected to have impacted the subject Property.

5.3 PHYSICAL SETTING SOURCES

Historic Aerial Photographs

Historic aerial photographs were available for the property from EDR and copies are provided in Appendix B. Historic aerial photographs were available for: 1941, 1958, 1965, 1971, 1974, 1985, 1989, 1994, 2006, 2009, 2013 and 2017.

The earliest photograph from 1941 show the site mostly undeveloped and much of the central portion cleared of trees and as agricultural fields. The former Nilsson Nurseries are shown at the west side of the subject site. An older building connected to the current Westchester Medical Center is shown south of the site but much of the nearby property is undeveloped.

Residential development north of the site is shown in the 1958 photo. The 1974 photo shows the site as mostly agricultural fields with the former nursery developed on the western side of the site. The current Skyline Drive industrial office park is not yet developed and the Sawmill Parkway is only partially constructed north of the site.

Fill on the subject property is first shown in the 1989 photo and the nearby Skyline Drive office park has been constructed by this date. The medical campus south of the site appears more developed. The photos from 1994 through 2011 show the property, adjoining and nearby properties to be developed similar to existing conditions.

Sanborn Maps

A single Sanborn map from 1942 was available for the property. The Sanborn map search is provided in Appendix C.

The map from 1942 was limited in scale and therefore did not show the area surrounding the property. No previous development is shown in the 1942 map.

Historic Topographic Maps

Historical topographic maps were available for the property from EDR and copies are provided in Appendix D. Historic maps were available for the years 1892, 1901, 1941, 1946 and 1957.

A total of eleven (11) topographic maps from 1892 through 2013 were available for the property. The oldest maps from 1892 through 1902 show no development on the subject property with the exception of a single residence in the north of the site near the intersection of current Old Saw Mill River Road and West Stevens Avenue. The maps from 1932 through 1947 show a single residence at the western edge of the site and two residences near Old Saw Mill Road. Those two residences are no longer existing. "Grasslands Hospital" is first shown on the 1932 map south of the site.

The map from 1957 shows a single residence at the western side of the property with a possible greenhouse building. The "County Home for Aged" is shown directly south of the site. The 1967 map shows two residences at the western side of the property and the single existing residence on the County property at the north of the site. The Nilsson Nursery buildings are shown in the 1979 map as well as a portion of the Saw Mill River Parkway ending at the eastern edge of the property.

Historic Report Summary

In summary, historical sources indicate that the property has had limited development since the earliest topographic maps from the late 1800's. Several former residences have existing on the property that are no longer present and first residence at the western edge of the site was present in 1932. Nine aerial photographs, five historical topographic maps, and three Sanborn Maps provide documentation for prior uses on the property. Data gaps (information at greater than 5-year intervals) for the historical information are, as follows:

1892 to 1902
1902 to 1932
1932 to 1938
1947 to 1957
1957 to 1965
1979 to 1985
1994 to 2006

These data gaps are the result of data failure, since all standard historical sources that are reasonably attainable and likely to be useful, have been reviewed. According to ASTM E 1527-13, Section 8.3.2.1, *"Review of standard historical sources at less than approximately five-year intervals is not required by this practice. If the specific use of the property appears unchanged over a period of longer than 5 years, then it is not required by this practice to research the use during that period*". As described above, all standard historical sources indicate that the property has been occupied residences since 1892 and with a commercial nursery since the late 1950's. According to the Team Environmental Phase 1 Update, the Nilsson Nurseries, a family owned business operated for approximately 75 years before closing in 2003.

5.4 LOCAL SETTING

The Property is mostly undeveloped with mature woods and overgrown agricultural fields. Six residences are located on the property. The property is located in a mixed-use suburban setting with a mixture of residential, commercial (restaurant), office and medical uses. The site has varied topography, generally sloping from southeast to northwest.

The subject property is situated within the Manhattan Prong geologic province, a region characterized by undifferentiated gneiss and granitic gneiss that dates from the Pre-Cambrian and Ordovician ages, as shown on the Geologic Map of New York, Lower Hudson Sheet, Fisher, 1970.

Regional surficial geology on the Property is identified on the State Surficial Geology map as lacustrine delta material including stratified sand and fine gravel deposits (Surficial Geologic Map of New York, Lower Hudson Sheet, Cadwell, 1989).

According to the Flood Insurance Rate Map the subject site is not situated within a flood hazard zone.

5.5 POTENTIAL VAPOR MIGRATION

This Phase 1/ Phase II investigation assessed the potential for hazardous substances or petroleum products to migrate onto the subject property from off-site, nearby properties. This includes solids and liquids at the surface as well as vapors in the subsurface. Soil vapors or soil gas is a concern when vapors from volatile organic compounds build up in soil from a chemical source (chemical or petroleum spill, leaking tank, buried containers), or if groundwater is impacted, soil gas can migrate from the groundwater. Soil gas may build up under building foundations and enter basements or buildings through cracked or compromised building foundations.

Based upon the results of the soil testing, soils at the site are not adversely impacted by volatile organic compounds. Therefore, there is minimal potential for vapors or soil gas to be generated or migrate within the site.

Based upon a review of topographic maps and observation of topography and surface drainage patterns near the property, the subject site does not appear to be potentially impacted by soil vapor migration.

6.0 SITE RECONNAISSANCE

The subject Property and environs were inspected on May 9 and 20, 2019, by Jon Dahlgren of TMA. The purpose of the site visits was to review the physical use and appearance of the Property and neighboring properties as well as activities on the adjacent to the Property. Photos taken during the site visit are provided in Appendix E.

The Property is mostly undeveloped with mature woods and overgrown agricultural fields. The property is crossed by two north-south trending stream corridors that contribute to the site's topography, with steep embankments around the streams and more gently sloping topography in the middle and at the western and eastern edges of the site.

The eastern approximately 60 acres has been long owned by Westchester County, and has remained relatively undeveloped. A single-family residence is located in the northern portion of the former County property near Old Saw Mill River Road. Aerial photos through 1985 show a large agricultural field in the center of the County property with much of the site including the stream corridors as wooded.

A single-family residence with a detached garage is located off of Old Saw Mill Road. The house was constructed in the 1960's, based on aerial photos. The house was vacant at the time of the site visit and the interior of the house was not inspected. The residence has a 1,000-gallon underground fuel oil storage tank located in the front yard above the driveway. A concrete pad and steel port covers identify the location. The age and condition of the tank are not known.

A fenced parking lot is located at the southern edge of the site near the intersection of Hospital Road and Woods Road. The parking lot is currently used by construction workers for the Westchester Medical Center. Currently, fill from the Medical Center construction is stockpiled in a level area north of the parking lot. The fill includes construction debris such as asphalt and concrete. Construction vehicles and equipment storage trailers were observed during the site visit. According to a property owner representative, the fill is required to be transported off-site by the Medical Center contractors.

According to a property owner representative, the field north of the parking lot has been used by Westchester County for excess fill material for many years. According to Aerial photographs, fill appeared to be first placed in this area in the late 1980's. The majority of this fill has been graded to generally match the surrounding topography, although the current topographic survey shows soil piles in several locations. The estimated area of historic fill is shown in Figure 2 – Soil Sampling Location Plan. Soil samples were collected and analyzed from this area, and the sampling is described in Section 8.0, below.

The western portion of the property contains approximately 19.2 acres is occupied by 5 single family residences and the remaining buildings of a former commercial nursery, Nilsson Nurseries. According to the Team Environmental Phase 1 Update (March 27, 2017) the nursery closed in 2013. The five residences were constructed in 1930's through the 1960's.

All of the five homes on the western portion of the site are occupied. The property and residence details are provided in Table 1 below.

Table 1 Building Summary		
Tax map Number	**Lot Area/ Address**	**Improvements**
116.08-1-3	2.10 acres 48 Saw Mill River Road	One-story residence (with basement) Approx. 1,700 sf 1958
116.08-1-4	0.96 ac. 48A Saw Mill River Road	One-story residence (with basement) and detached two-bay garage Approx. 1,500 sf 1930
116.08-1-5	2.2 ac.	Former Nilsson Nurseries complex Greenhouses, garages, office and potting shed. 1960's
116.08-1-6	2.57 ac. 42 Saw mill River Road	Two-story residence with attached two-bay garage Approx. 1,500 sf 1930
116.08-1-7	1.0 ac. 44 Saw Mill River Road	One-story residence with basement and attached two-bay garage Approx. 1,500 sf 1969
116.08-1-8	2.57 Ac. 46 Saw Mill River Road	One-story residence with basement and attached two-bay garage Approx. 2,400 sf 1968
111.20-1-80	7.52 ac.	Undeveloped wooded property at northwest portion of site
116.08-1-9	59.95 ac. Hospital Road	Former County property. Mostly undeveloped property. Two-story residence with basement constructed 1960's with detached garage.
Source: Team Environmental Consultants, Inc., March 27, 2017 and Tim Miller Associates, Inc. 2019.		

During the site visit, fuel oil fill ports and vents were observed at the following residences:

- 44 Saw Mill River Road (116.08-1-7)
- 42 Saw Mill River Road (116.08-1-6)
- 48 Saw Mill River Road (116.08-1-3)

According to the Team Environmental Phase 1 Update, the five residences at the western side of the property are heated with fuel oil systems and each residence has an underground storage tank ranging from 1,000 to 2,000 gallons in size. The five tanks were tightness tested in November, 2010 by Ecologic Environmental of Sparta New Jersey. Those tanks were tested on June 10, 2003 by U.S. Tank Tech of Carmel New York, using NYSDEC approved methodology. The findings of the tank tightness test

indicated that the tanks located at 42, 44, 48 and 48A Saw Mill River Road passed the precision test. Testing of the tank at 46 Saw Mill River Road was unable to be tested due to a damaged vent pipe. In lieu of testing, two soil samples were collected along the exterior sides of the tank. No soil staining or petroleum odors were observed during sampling and the analytical results for Diesel Range Organics (DRO) were below detectable levels. EcoLogic concluded that, "No contamination was detected around the underground tank located at 46 Saw Mill River Road". Documentation for the tightness testing was not available for this report. Given the time since the last testing, it is recommended that the tanks be retested (see Section 12.0 Recommendations).

A 275-gallon aboveground fuel oil storage tank was observed next to the garage at 48A Saw Mill River Road. The tank appeared to serve the garage and was in good condition. The tank had no secondary containment.

The former Nilsson Nurseries property contains the dilapidated greenhouses, garages and office for the closed business. During the site visit, it appears that the property may still be used for the staging of vehicles and equipment for landscaping businesses. The structures are in disrepair and the grounds are overgrown. The garages contained refuse and equipment from the former business and landscaping debris remains at the rear (east side) of that property. Several partially filled drums of ethylene glycol (anti-freeze) were observed in the garage.

Limited soil sampling for pesticides and herbicides was completed by Team Environmental in 2003. The methodology and results of testing are provided in the Phase 1 Update Report (see Appendix F). Three composite soil samples were collected in the vicinity of the greenhouse structures. The samples were analyzed for pesticides (EPA method 8080) and herbicides (EPA method 8150). The results of laboratory analysis indicated no herbicide compounds above the method detection limit.

Each of the three samples contained detectable levels of 4,4-DDT related compounds and one sample contained chlordane. The concentrations of all compounds were below the established NYSDEC clean-up guidance values for soil (Technical and Administrative Guidance Memorandum No. 4046).

During the site visits no organized illicit dumping, refuse or release of petroleum or hazardous materials was observed. Limited debris was observed in the two stream corridors including the remains of a vehicle in the stream adjacent to West Stevens Drive at the northern edge of the site.

Utilities

Private electric, cable and telephone from surrounding roads. The six residences on the property are served by individual wells and septic systems.

Petroleum/Chemical Bulk Storage

Six underground fuel oil storage tanks are located on the subject property, serving each of the on-site residences. Four of the tanks in the western portion of the site were tightness tested in 2010 and were found to have passed the tightness test (see discussion above). The tank at 46 Saw Mill River Road could not be tested due to a damaged vent pipe, but soil testing around the tank confirmed there was no impact to

the environment from that tank. The condition of the 1000-gallon underground tank at the residence near Old Saw Mill River Road could not be determined.

A 275-gallon aboveground fuel oil tank is located next to the garage at the 48A Saw Mill River Road property. The tank appeared in good condition, but it had no secondary containment.

Septic Systems, Leach Beds, or Other Subsurface Structures

Individual septic systems serve the six residences on the subject property. The locations of these individual systems was not confirmed.

Drums or Containers

As described above, several partially filled 55-gallon drums of ethylene glycol were observed in two garages at the former Nilsson Nurseries property. The drums appeared sound and no leaks or spills were observed.

Waste Disposal Practices

Residential waste from the on-site residences is collected by private waste contractors. No commercial waste is generated from the site.

Polychlorinated Biphenyl (PCB) Survey

The inspector conducted a visual survey for the presence of PCB's or PCB-containing equipment, e.g., transformers, capacitors, and hydraulic equipment. PCBs were widely used in such equipment until 1979 when U.S. EPA banned such use. Many utilities have since acted to replace PCB containing transformers and capacitors with other substances.

No suspect PCBs or PCB-containing equipment was observed during the site walk-through.

Surface Water, Impoundments, and Other Land Uses

Two perennial streams cross from south to north through the site. No other ponds or surface water impoundments were observed on the property.

Dumping

There was no organized illicit dumping observed on the property. Vehicle access into the site is limited, thereby reducing the potential for dumping.

7.0 INTERVIEWS

7.1 PROPERTY OWNER

The current property owner representative, Mr. Neil Deluca was interviewed regarding environmental conditions on the subject property. Mr. Deluca was asked questions consistent with ASTM E 1527-13 *Section 10 - Interviews with Past and Present Owners*

and Occupants. A questionnaire is provided in Appendix F. Mr. Deluca provided a previous environmental report completed for the property.

7.2 GOVERNMENT OFFICIALS

A records review was conducted at the Town of Mount Pleasant Assessor's office and Building Department. These records provided no indication of environmental concerns associated with the Property.

Officials with Westchester County were interviewed to better understand the source and timing of the filling on the property by the County. Mr. Vince Kopicki, PE, Commissioner of Environmental Facilities was contacted on July 15, 2019. Mr. Kopicki was not familiar with the source or history of the fill material. He suggested Mr. Anthony Zaino, Assistant Commissioner, Department of Planning, as a potential source of information. Mr. Zaino was familiar with the Westchester County Medical Center and confirmed that the filling generally occurred from the late 1980's to present. After speaking with staff, Mr. Zaino indicated that all of the fill material on the County property was generated from construction projects on the larger County complex including the Medical Center. No fill material came from off-site.

The New York State Department of Environmental Conservation (NYSDEC) and the Westchester County Department of Health (WCDOH) were also sent information request (FOIL) letters. These agencies have not responded to the inquiries at the writing of this report. These agencies have not responded to our FOIL request as of the submission of the report. Any response from the agencies will be forwarded to Mr. Neil Deluca.

8.0 SOIL SAMPLING

Given the historic filling on the site by Westchester County and the unclear origin of the fill, soil samples were collected from areas of former filling on the property on May 9, 2019. As described, a large area of historic filling is located north of the parking lot, in the south-central portion of the site. A backhoe excavator was used to obtain samples since mixed rock and concrete in the fill may have limited the effectiveness of soil borings.

Test pits were excavated at 10 locations north of the parking lot, as shown in Figure 2 – Soil Sampling Location Plan. The depth of fill and sampling depths are shown in Table 2 (see Appendix I – Soil Analytical Results).

The historic fill soil can generally be characterized as silty sand with gravel mixed with varying amounts of asphalt. The depth of fill varied from 6-inches at location S-5, near the access road to 8.0 feet at location S-3. Two piles of historic fill were sampled at locations S-6 and S-9. The S-6 location is a large vegetation covered pile that is shown on the site survey. The S-9 sample is from smaller piles of relatively clean soil (limited asphalt and brick) that appear to have been placed more recently.

The fill soil was screened in the field with a photo-ionization (PID) meter to detect volatile organic compounds. The screening found no volatiles in soil except in soils at location S-6, with a reading of 23.0 ppm.

On May 20, 2019 two additional soil samples (S-11 and S-12) were collected from fill

piles observed on the western portion of the site near Saw Mill River Road. The piles were generally 3 to 4 feet in height and appeared to have been more recently placed, given the limited vegetation found around the piles. This fill appeared relatively clean with no obvious concrete or asphalt. Shallow samples (6 to 12 inches) were collected with hand tools. Sample locations are shown in Figure 2.

Following the receipt of the initial sampling analytical results, three additional samples were collected on June 26, 2019 from the soil pile associated with sample S-6. These samples were collected to better characterize the soil pile. Samples S-13, S-14 and S-15 were collected with hand tools at depths of approximately 1.0 to 1.5 feet. Sample locations are shown in Figure 2.

As indicated, more recently deposited piles of concrete, asphalt and fill are located directly north of the parking lot. This material was generated during recent renovations and expansion of the Westchester Medical Center. In order to characterize this material, five (5) composite samples were collected from the above-grade fill piles on June 26, 2019 and were labeled F-1 through F-5. The samples were screened with a PID meter and collected with hand tools at generally 6 to 12 inches in depth. Samples F-1 through F-5 are representative of recent construction fill.

Samples were documented, packaged and transported, using professional methodology. EnviroTest Laboratories, Inc. analyzed the samples (NYSDOH ELAP# 11693). The soil samples (S-1 through S-12 and F-1 through F-5) were analyzed for volatile organic compounds (VOCs)(EPA method 8260), semi-volatile organic compounds (SVOCs)(EPA method 8270), pesticides (EPA method 8080) and RCRA 8 metals.

Samples S-13 through S-15 were only analyzed for SVOCs and RCRA 8 metals since those were the compounds detected in sample S-6.

Analytical Results

Analytical results for the soil sampling is summarized in Tables 2 through 5, in Appendix I – Soil Analytical Results. Appendix I also includes the full laboratory analytical reports.

The analytical results for the twelve fill soil samples showed no concentrations of VOC's above the laboratory detection limits (see Tables 2 through 5, attached). Concentrations of pesticide – herbicide compounds were below the laboratory detection limits. Metals concentrations were generally below the DEC unrestricted use soil clean-up objectives (DER-10). Selenium concentrations were slightly above the DEC clean-up objective (3.9 ppm) in samples S-1 through S10. The sample from location S-6 had concentrations of chromium and lead above the DEC unrestricted use clean-up levels. The samples from S-11 and S-12 had concentrations of silver slightly above the DEC clean-up objectives.

Samples from locations S-1, S-6 and S-7 had concentrations of semi-volatile compounds (SVOC) above the DEC unrestricted use clean-up guidelines with several compounds above the restricted commercial use guidelines. Sample S-6 taken from an above-grade soil pile at the edge of the access road, had the highest concentrations of semi-volatiles.

The SVOC compounds detected are common in urban soils and may be attributed to asphalt and roadway run-off.

As described, the elevated concentrations of SVOC compounds appear to be limited to the area around location S-6, in the larger soil pile east of the access road (see Figure 2 – Soil Sampling Location Plan). Samples S-13, S-14 and S-15 provide information for other areas in that soil pile. Samples S-13 and S-14 had one and two semi-volatile compounds above the DEC unrestricted use clean-up guidelines and sample S-15 had five SVOC compounds above the DEC guidelines.

Given the relatively elevated concentrations of semi-volatile compounds and metals in Sample S-6 and the above-grade nature of the soil pile, soil in the area of S-6 should be excavated and removed from the site (See Section 12 – Recommendations).

Although the samples from locations S-1 and S-7 contained three semi-volatile compounds (benzo-a-anthracene, benzo-a-pyrene, and benzo-b-fluoranthene) above the restricted commercial use criteria, the two fill areas may be capped as part of the proposed development to restrict direct contact with soils. The proposed recommendations for fill soils in this report will require Town and Westchester County Department of Health (WCDOH) review and approval.

The analytical results for samples F-1 through F-5 from recent construction related fill indicate that no parameters (VOC, SVOC, pesticides, PCBs and RCRA 8 metals) were above DEC unrestricted use soil clean-up guidelines. This fill soil can be used on-site as part of the proposed development.

9.0 FINDINGS

This Environmental Site Assessment (ESA) involved a multi-task investigation to establish current and historic environmental conditions on the Property. The specific findings of this Environmental Site Assessment are, as follows:

1. The subject Property consists of eight (8) tax lots, approximately 79.15 acres in size and is located north of Hospital Road and west of the Saw Mill Parkway in Mount Pleasant, Westchester County, New York.

2. The property is located in a developed suburban area with mixed residential, hospital and commercial uses. The site contains varied topography, with higher elevations in the southeast corner and lowest elevations in the northwest corner. The property is crossed by two north-south trending stream corridors with more level ground in the central portion of the site.

3. The Property is mostly undeveloped with areas of mature woods and overgrown agricultural fields. Six residences are located on the site, with five occupied homes in the western portion of the site near Saw Mill River Road. A parking lot is located off of Hospital Road near Woods Road in the southern portion of the site. A level area north of the parking lot is currently used to store fill material and construction equipment for the construction of the Westchester Medical Center. The Property was not identified as a hazardous materials generator or storage site in the environmental regulatory database review.

4. Historical sources, including aerial photographs and Town records indicate that the site has had residences since the late 1800's. A commercial nursery (Nilsson Nurseries) operated at the site since the 1940's but closed in 2012. The County property (60 acres) has remained largely undeveloped.

6. The subject Property and environs were inspected on May 9 and May 20, 2019 by Jon Dahlgren of TMA. The purpose of the site visit was to review the physical use and appearance of the Property and neighboring properties as well as activities on and adjacent to the Property.

7. The eastern approximately 60 acres has been long owned by Westchester County, and has remained relatively undeveloped. It contains mature woods and overgrown fields. A single-family residence is located in the northern portion of the former County property near Old Saw Mill River Road.

8. A fenced parking lot is located at the southern edge of the site near the intersection of Hospital Road and Woods Road. The parking lot is currently used by construction workers for the Westchester Medical Center. Currently, fill from the Medical Center construction is stockpiled in a level area north of the parking lot. The fill includes construction debris such as asphalt and concrete.

9. The western portion of the property contains approximately 19.2 acres and is occupied by five single-family residences and the remaining buildings of a former commercial nursery, Nilsson Nurseries. The former Nilsson Nurseries property contains dilapidated greenhouses, garages and office space. The structures are in disrepair and the grounds are overgrown. The garages contained refuse and equipment from the former business and landscaping debris remains at the rear (east side) of that property. Several partially filled drums of ethylene glycol (anti-freeze) were observed in the garage.

10. Six underground fuel oil storage tanks are located on the subject property, serving each of the on-site residences. Four of the tanks in the western portion of the site were tightness tested in 2010 and were found to have passed the tightness test. The tank at 46 Saw Mill River Road could not be tested due to a damaged vent pipe, but soil testing around the tank confirmed there was no impact to the environment from that tank. The condition of the 1000-gallon underground tank at the residence near Old Saw Mill River Road could not be determined. A 275-gallon aboveground fuel oil tank is located next to the garage at the 48A Saw Mill River Road property. The tank appeared in good condition, but it had no secondary containment.

11. A Search of the regulatory agency databases was performed as part of this environmental review. The subject Property is not listed on the National Priorities List or the Emergency Response Notification System. The Property does not appear to be subject to any current regulatory enforcement actions by Federal, State, or local regulatory agency.

12. The property was not identified as a hazardous materials generator or storage site in the environmental regulatory database review. No sites that store, transport or dispose of hazardous waste materials were identified on adjoining properties.

13. The database indicates that 37 leaking tank incidents were reported within 0.5 miles from the subject site and 17 DEC spill incidents were reported within one-quarter mile from the subject site.

14. A spill was reported in January 2000 for the Nilsson Nurseries related to the removal of two underground storage tanks. According to the database soil contamination was observed during the tank removal. According to the Team Environmental *Phase 1*

ESA Review & Database Update Report (March 27, 2017) approximately one-dump-truck load of impacted soil was removed and transported from the site. The spill incident was closed on February 1, 2001 to the satisfaction of Westchester County and no longer impacts the subject site. The closed spill incident is considered a Historic Recognized Environmental Condition (HREC).

15. Soil samples were collected from areas of former filling on May 9, 2019, May 20, 2019 and on June 26, 2019. A large area of historic filling is located north of the parking lot, in the south-central portion of the site. Test pits were excavated at 10 locations north of the parking lot. Two additional soil samples (S-11 and S-12) were collected from fill piles observed on the western portion of the site near Saw Mill River Road. Additional samples (S-13 to S-15) were collected around sample location S-6 to better characterize soil in that area.

16. The analytical results for the fifteen historic fill soil samples showed no concentrations of VOC's above the laboratory detection limits. Concentrations of pesticide – herbicide compounds were below the laboratory detection limits. Metals concentrations were generally below the DEC unrestricted use soil clean-up objectives (DER-10). Selenium concentrations were slightly above the DEC clean-up objective (3.9 ppm) in samples S-1 through S-10. The sample from location S-6 had concentrations of chromium and lead above the DEC unrestricted use clean-up levels.

17. Samples from locations S-1, S-6 (and related S-13, S-14, S-15), and S-7 had concentrations of semi-volatile compounds (SVOC) above the DEC unrestricted use clean-up guidelines with several compounds above the restricted commercial use guidelines. Sample S-6 taken from an above-grade soil pile at the edge of the access road, had the highest concentrations of semi-volatiles.

18. The analytical results for samples F-1 through F-5 from recent construction related fill indicate that no parameters (VOC, SVOC, pesticides, PCBs and RCRA 8 metals) were above DEC unrestricted use soil clean-up guidelines. This fill soil can be used on-site as part of the proposed development.

10.0 OPINIONS

The investigation has found recognized environmental conditions on the subject Property that have the potential to affect the Property. This opinion is based on the information collected and reviewed for this report.

The recognized environmental conditions include:

1) Six underground fuel oil tanks associated with the onsite residences are in-use on the property. Although five of the tanks were tightness tested in 2010, the tanks current condition cannot be determined.

2) A 275-gallon aboveground fuel oil tank is located adjacent to the garage at 48A Saw Mill River Road. The tank appeared in good condition with no observed leaks or spills but it had no secondary containment.

3) *Several 55-gallon drums of ethylene glycol were observed in two garages from the former Nilsson Nurseries.*

11.0 CONCLUSIONS

We have performed a Phase I/ Phase II Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 for the Property identified as Tax Map numbers: 116.08-1-3 through 11.08-1-9, and 11.20-1-80 in the Town of Mount Pleasant, New York. Any exceptions to, or deletions from, this practice are described in Section 13.0 of this report.

12.0 RECOMMENDATIONS

1) All drums of ethylene glycol should be removed from the two garages from the former Nilsson Nurseries.

2) The six (6) underground fuel oil tanks connected to the six residences should be tightness tested by a qualified tank testing contractor, since they remain in use. Secondary containment should be provided for the 275-gallon above ground tank near the garage at 48A Saw Mill River Road.

3) A fill soil management plan should be developed with the Town and the WCDOH, for the three locations with elevated concentrations of semi-volatile compounds. (S-1, S-6 (and related S-13, S-14 and S-15), and S-7).

4) Fill piles associated with the Westchester Medical Center construction can be reused on-site. Concrete, asphalt and organic material such as tree stumps should be removed from the site if the material cannot be recycled on-site.

13.0 DEVIATIONS & ADDITIONAL SERVICES

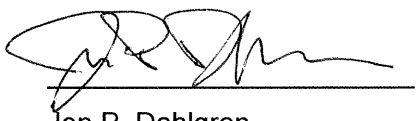

This Phase 1/ Phase II Assessment included services in addition to those outlined in ASTM E 1527-13, including: 1) soil sampling and analysis was completed at the property.

Professional Declaration

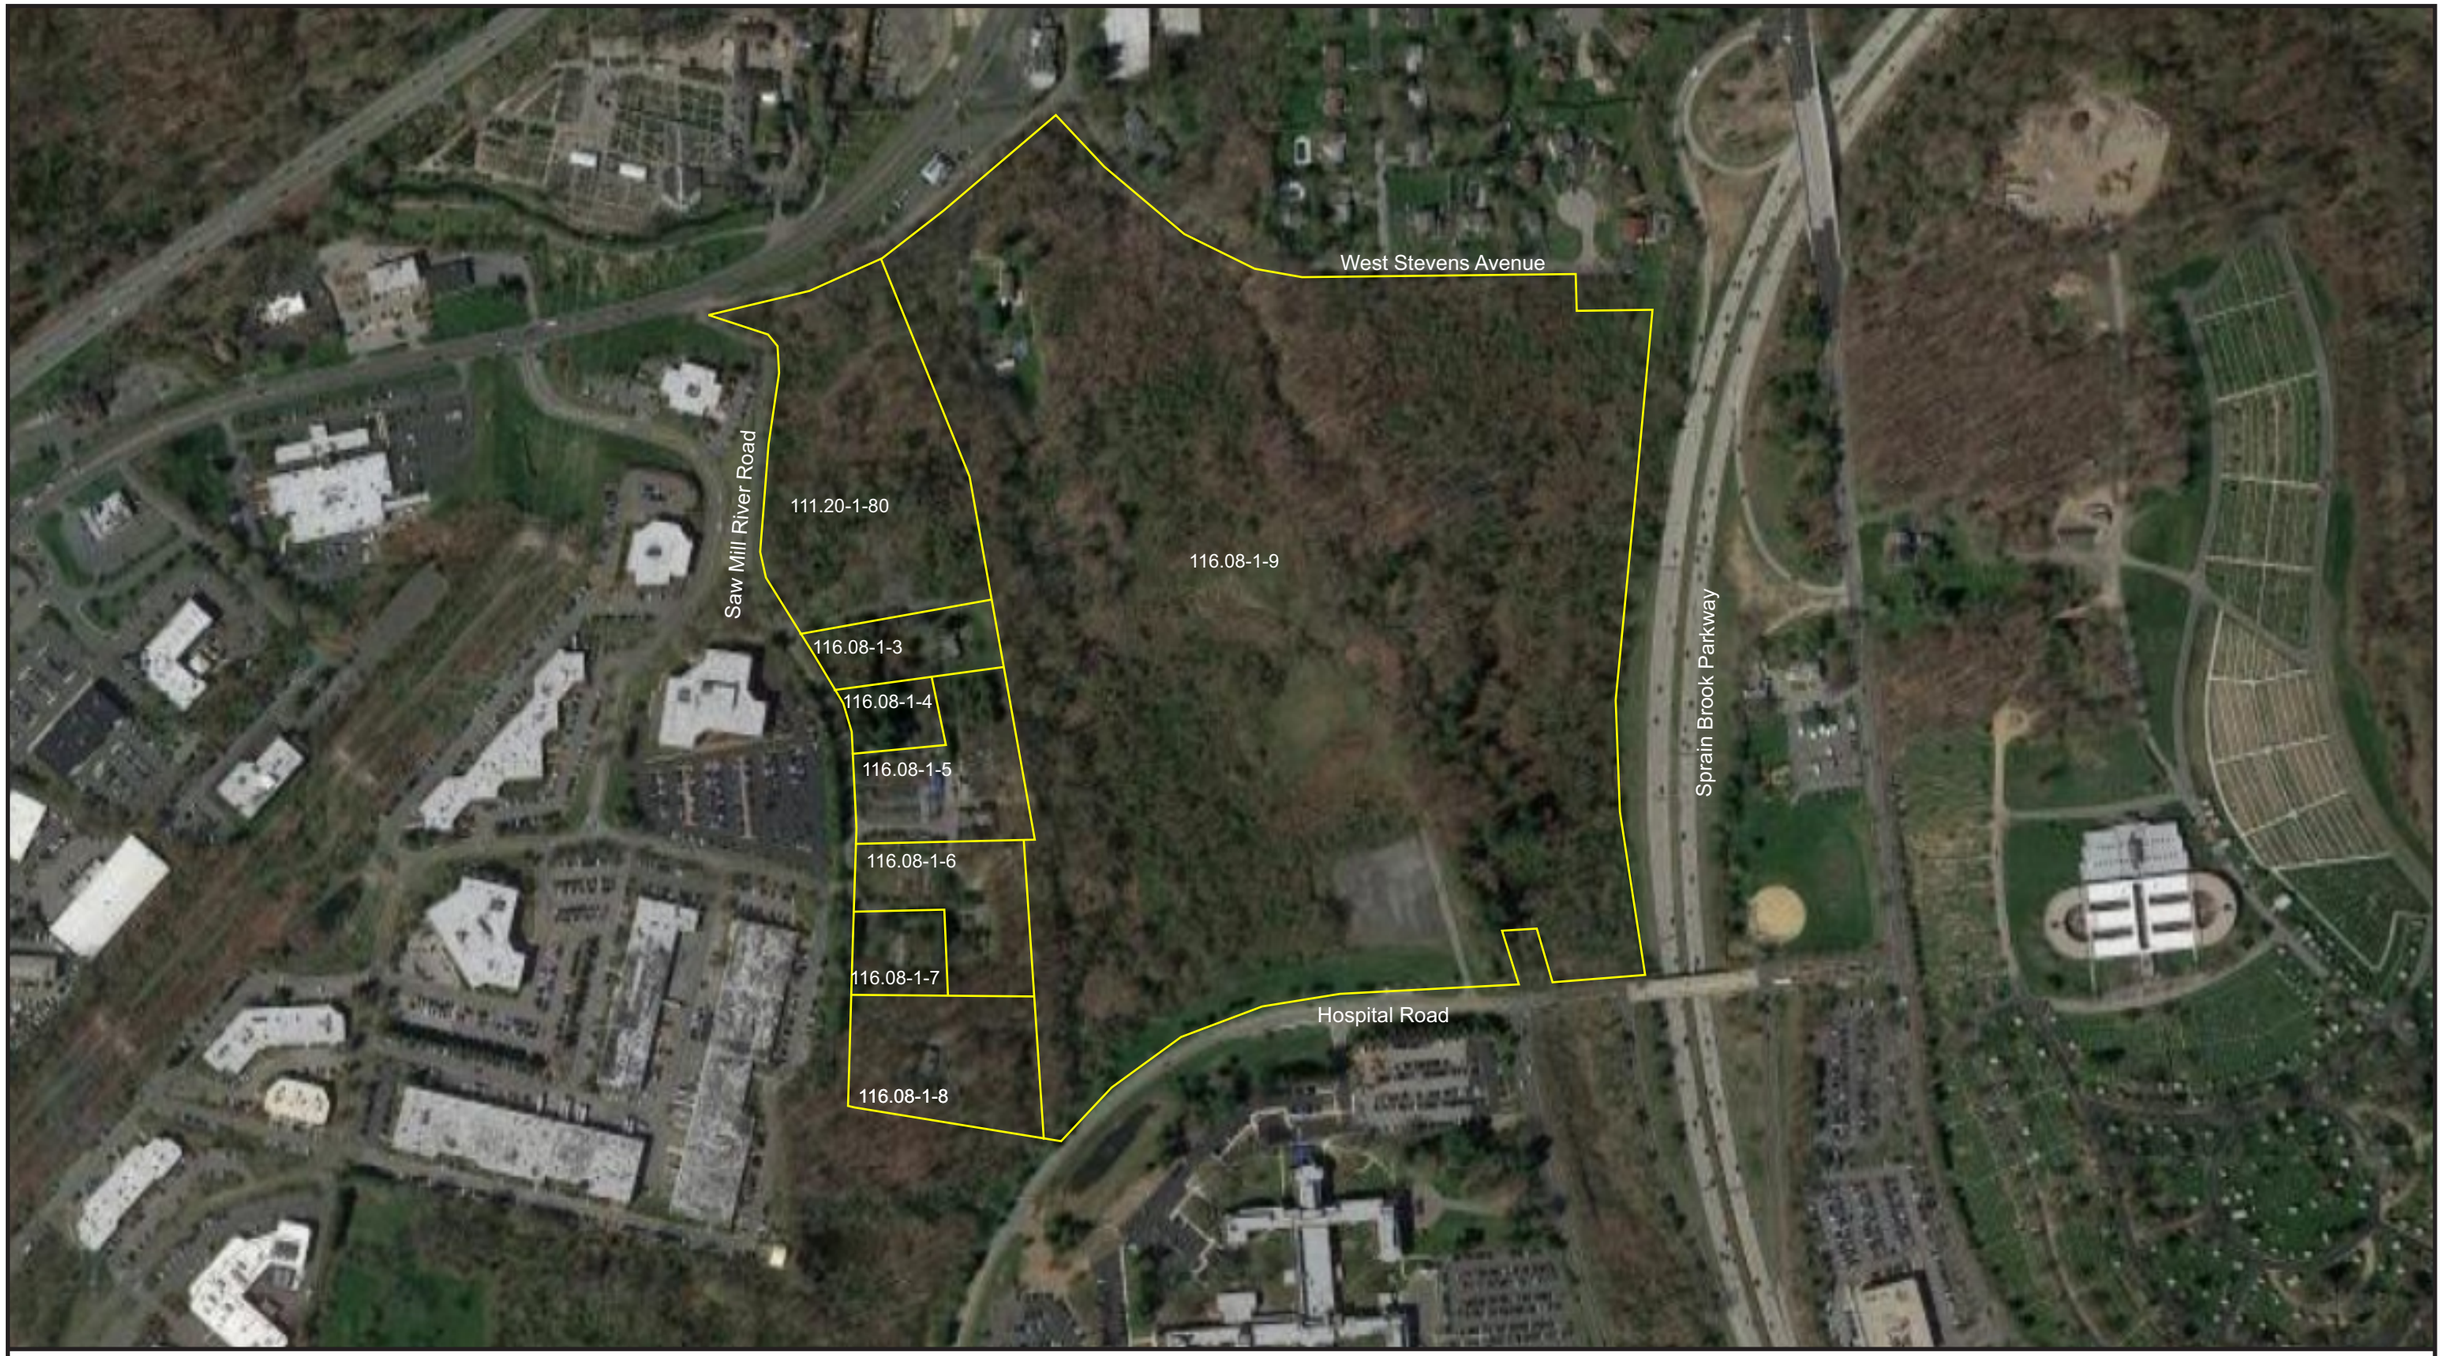

We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312 and;

We have specific qualifications based upon education, training, and experience to assess a property of the nature, history and setting of the property (see Appendix G – Professional Qualifications). We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/25/2019 has revealed that there is 1

CORRACTS site within approximately 1 mile of the target property.

IBM CORP - EASTVIEW EPA ID:: NYD980653877	***OLD SAW MILL RD AT 1***	***SW 1/2 - 1 (0.895 mi.)***	***89***	***233***

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

WESTCHESTER MEDICAL EPA ID:: NYR000194977	100 WOODS RD	SSE 1/8 - 1/4 (0.211 mi.)	S65	184

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are

4 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/12/2018 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/12/2018 has revealed that there are 37 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 7 NY UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/12/2018 has revealed that there are 17 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 7 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110004413395

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TSCA SUBMITTER

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110058914304

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

FINDS:

Registry ID: 110014446894

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

EVIONYX INC (Continued) **1015747055**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"8/3/10 need update JO'M 1/16/13: This is a 15 year old TTF. There are 37 tanks listed at this PBS facility. None of the active tanks, nor any of the inactive tanks listed on the registration have a 1500 gallon capacity. Unable to determine which UST corresponds to this TTF. There are two 2K diesel USTs and one 1K diesel UST that were removed in June of 1997, five months after this TTF report was made. See Spill 9703187. There are also four 2K and three 1K in-service diesel tanks currently on the registration. All of these tanks have passed tank tests subsequent to this failure. This TTF Spill administratively closed. jod"

Registry ID: 110004376988

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and

ENVIRONMENTAL MANAGEMENT SOLUTIONS (Continued) **1001223675**

it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

FINDS:

Registry ID: 110011397354

Environmental Interest/Information System
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

Registry ID: 110014366435

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 18831

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 3227

Waste code: D005
Waste name: BARIUM

Date Perm Closure:	09/01/1994
Tank Location:	5. Underground including vaulted with no access for inspection
Tank Type:	4. Fiberglass coated steel
Tank Internal Protection:	3. Fiberglass liner (FRP)
Tank External Protection:	4. Fiberglass
Tank Secondary Containment:	4. Double-Walled (underground only)
Piping Location:	2. Underground/on ground
Piping Type:	6. Fiberglass reinforced plastic (FRP)
Piping External Protection:	4. Fiberglass
Overfill Prevention:	2. High Level Alarm
Piping Secondary Containment:	4. Double-Walled (underground only)
Spill Prevention:	1. Catch Basin
Dispenser:	2. Suction

Tank Number:	RT1old
Status:	3. Closed - Removed
Capacity:	1000
Product Stored:	0008. Diesel
Product Stored Percent:	Not reported
Tank Leak Detection:	0. None
Date Installation:	12/01/1970
Date Perm Closure:	09/01/1994
Tank Location:	5. Underground including vaulted with no access for inspection
Tank Type:	1. Steel/Carbon steel/Iron
Tank Internal Protection:	0. None
Tank External Protection:	0. None
Tank Secondary Containment:	0. None
Piping Location:	Not reported
Piping Type:	2. Galvanized steel
Piping External Protection:	0. None
Overfill Prevention:	0. None
Piping Secondary Containment:	Not reported
Spill Prevention:	0. None
Dispenser:	2. Suction

FINDS:

Registry ID: 110004414296

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: Location: One Commerce Park site is located in a light industrial area on Commerce Drive directly adjacent (east) to the Taconic Parkway next to (west of) the Farrand Controls site (360046)in the Town of Mount Pleasant, Westchester County. Site Features: The site consists of a two story building, parking lot and green space located on approximately 10 acres. A paved parking lot is in front (south) of the building and the topography slopes up steeply to a rocky, wooded area to the east and north. Current Zoning and Land Use: The site is zoned commercial. The site contains light industrial and commercial facilities. A rock climbing gym is located on the eastern end of the building. Past Use of the Site: Based upon the review of reports for the adjacent Farrand site, the Site was first developed in 1958 by Farrand Controls (and / or its subsidiaries) which utilized the on-site building for industrial-manufacturing and office use through circa 1990. In 1990, the site was sold to Messenger Realty (Messenger). It is reported that that DEL Global Technologies (a former tenant), which was on-site from 1991 through at least 2003, generated waste trichloroethene (TCE). The current property owner,

ONE COMMERCE PARK (Continued) **S113917106**

DP16 LLC, signed a consent order in June 2009 for a remedial program. The SC work plan was approved in November 2009. The first phase of field work was completed in spring 2010. Additional fieldwork was required and conducted in October 2011. Site Geology and Hydrogeology: In general, the developed portions of the site are relatively level with a several-foot decrease in elevation to the south - southeast. The vegetated northern portions are dominated by steep bedrock outcrops, with overall increases in elevation from the developed buildings to the top of the adjacent ridge top of approximately 40 to 60 feet. The sediments underlying the northern portion of the site are dominated by sand and silty sand. Inter-bedded, non-contiguous silt layers are present in the southern and central portions of the property. Bedrock is encountered at shallow depths along the northern portion of the property, and occurs at deeper depths to the south. The impermeable bedrock surface steeply dips towards the southwest exhibiting increases and decreases in elevation over relatively short distances. There is a topographic depression in the bedrock surface in the vicinity of MW-1 as unconsolidated sediments were encountered at a terminal depth of the boring at 56 ft bgs. Observations are consistent with an east-west trending, steep-sided valley, likely formed by glaciers, which subsequent to the retreat, was filled with fluvial or lacustrine sediments. The sitewide groundwater flow directions in the shallow and deep zones were to the south and southeast, and east southeast. In the intermediate zone, flow was to the southwest. There was a significant upward gradient from the intermediate to shallow wells in the MW-1 and MW-3 well locations.

Env Problem: Nature and Extent of Contamination: Prior to Completion of Remediation Based upon investigations conducted to date, the primary contaminants of concern include halogenated volatile organic compounds (VOCs) such as trichloroethene (TCE) that are impacting groundwater at a localized region in the area of the MW-1 well cluster, at the Concrete Pad "Chemical Pen" Area of Concern (AOC). Soil - Detections of Freon 113, in the vicinity of the former Chemical Pen, were well below SCO guidance values. Very low concentrations, well below any SCO values, of tetrachloroethene (PCE), TCE, cis-1,2-dichloroethene (DCE), and 1,1,1-trichloroethane (TCA) were sporadically detected in soil samples, mostly in the vicinity of the two loading docks and the concrete pad. Very low concentrations, well below any SCO values, of various petroleum-related VOCs, such as BTEX, carbon disulfide, various other alkylated benzenes, and napthalene were detected in the majority of the soil samples collected during the test pit excavation program in the vicinity of the concrete pad AOC. 7 soil samples from 6 soil borings were tested for TAL metals. Chromium (3 samples, 2 borings), copper (1 sample), lead (1 sample), and nickel (3 samples, 2 borings) were detected above unrestricted SCO values, but well below the commercial use SCO values. Groundwater - Halogenated VOCs, primarily in the form of 1,1-dichloroethane (DCA), TCE, and DCE were detected in the grab groundwater samples from the boring locations along the property line between the site and the adjacent Farrand Controls site (GW-1, GW-2, and GW-3), with the highest concentrations in the shallow and intermediate-depth samples from GW-2 (952 ppb total VOCs). The April 2010 groundwater analytical data indicated that 9,600 ppb of TCE were detected in the MW-1S (shallow, 5-10 ft bgs) sample. Lower concentrations of TCA (290 ppb), and DCE (980 ppb) were also detected, as were 200 ppb of benzene. The concentrations of the

ONE COMMERCE PARK (Continued) **S113917106**

halogenated VOCs generally attenuated in the MW-1I (intermediate, 30-35 ft bgs) sample. (700 ppb TCE, <20 ppb TCA, and 46 ppb benzene). 87 ppb of vinyl chloride (VC) were also detected in the MW-1I sample. With the exception of a low level detection of benzene in MW-1D (deep, 50-55 ft bgs), none of the VOCs present in the overlying groundwater samples were detected. TCE at 25 ppb and DCE at 5.4 ppb were the only TCL VOCs detected in the MW-2D sample. DCE and TCE were detected in the MW-3S and MW-3I groundwater samples. Chloroform at 8.2 ppb and TCE at 10 ppb were detected in MW-3D. The March 2012 groundwater analytical data indicated a similar suite of halogenated VOCs that were observed in April 2010 were also present in the MW-1S sample, although the concentration of TCE decreased to 774 ppb, DCE to 218 ppb, and TCA to 9.7 ppb, while benzene increased to 558 ppb. Due to lower detection limits, VC was detected at 89.3 ppb. Also, 21.6 ppb of Freon 113 were detected. A similar suite of halogenated VOCs at similar concentrations were detected in the MW-1I samples in both the 2010 and 2012 sample events. Due to lower detection limits, Freon 113 was also detected at 10 ppb. The concentration of benzene, increased to 11.6 ppb in MW-1D. In MW-2D, TCE was detected at 26 ppb, and DCE at 6.5 ppb. In MW-4I, DCA was detected at 5 ppb, benzene at 3.7 ppb, toluene at 15.2 ppb, TCE at 5.4 ppb, xylenes at 9.2 ppb, and DCE at 7.4 ppb. Soil Vapor & Indoor Air - A SVI evaluation was conducted in the rock climbing gym. The sub-slab soil vapor indoor air quality data for DCE, 1,1-DCE, TCA, and PCE indicated that "No Further Action" is required, based on the matrices in the NYSDOH guidance document. The data for carbon tetrachloride (CT) and VC indicated that "No Further Action" is required, only if the laboratory dectection limits were lower. Otherwise, "Take Reasonable and Practical Actions to Identify Source(s) and Reduce Exposures" would be required as well. A couple of non-matrix VOCs that were present in the indoor air sample exceeding comparison values were attributed to breakdown of disinfectants utilized in the rock climbing gym. 16 passive soil vapor points were installed throughout the site. The highest detection of halogenated VOCs was at SV-5, located near the groundwater sump, a suspected drum storage area, and a loading dock. As a result, portions of the subsequent soil-sampling program were implemented to address this area. VOCs related to these soil samples were below SCO values. Chloromethane was detected in all the samples. A typical source for chloromethane is the interaction of salt/sunlight and biomass, a naturally occuring phenomenon. Acetone, a common lab contaminant, was also detected. The highest concentration of acetone was detected below the floor slab of the rock climbing gym. The facility uses disinfecting agents which can eventually break down to acetone. Freon 113 was detected at the soil vapor point closest to the adjacent Farrand Controls site, the likely source of the detection. Detections of carbon disulfide are likely due to the asphalt paving. Miscellaneous VOCs were sporadically detected in several of the vapor samples.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Contact country: US
Contact telephone: Not reported
Contact email: Not reported
EPA Region: 02
Land type: Facility is not located on Indian land. Additional information is not known.
Classification: TSDF
Description: Handler is engaged in the treatment, storage or disposal of hazardous waste
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:
Owner/operator name: KAREN DEVELOPEMENTS INC
Owner/operator address: OLD SAW MILL RIVER RD PO 689
TARRYTOWN, NY 10591
Owner/operator country: US
Owner/operator telephone: 914-789-2529
Owner/operator email: Not reported
Owner/operator fax: Not reported
Owner/operator extension: Not reported
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported

IBM CORP - EASTVIEW RESEARCH FACILITY (Continued) **1000108752**

Owner/Op end date: Not reported

Owner/operator name: INTERNATIONAL BUSINESS MACHINES CORP.
Owner/operator address: PO BOX 218
YORKTOWN HEIGHTS, NY 10598
Owner/operator country: US
Owner/operator telephone: 914-945-3000
Owner/operator email: Not reported
Owner/operator fax: Not reported
Owner/operator extension: Not reported
Legal status: Private
Owner/Operator Type: Operator
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: Yes
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:

Contact address:	PO BOX 218 YORKTOWN HEIGHTS, NY 10598
Contact country:	US
Contact telephone:	Not reported
Contact email:	Not reported
EPA Region:	02
Land type:	Facility is not located on Indian land. Additional information is not known.
Classification:	TSDF
Description:	Handler is engaged in the treatment, storage or disposal of hazardous waste
Classification:	Non-Generator
Description:	Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name:	KAREN DEVELOPEMENTS INC
Owner/operator address:	OLD SAW MILL RIVER RD PO 689 TARRYTOWN, NY 10591
Owner/operator country:	US
Owner/operator telephone:	914-789-2529
Owner/operator email:	Not reported
Owner/operator fax:	Not reported
Owner/operator extension:	Not reported
Legal status:	Private
Owner/Operator Type:	Owner
Owner/Op start date:	Not reported
Owner/Op end date:	Not reported

Owner/operator name:	INTERNATIONAL BUSINESS MACHINES CORP.
Owner/operator address:	PO BOX 218 YORKTOWN HEIGHTS, NY 10598
Owner/operator country:	US
Owner/operator telephone:	914-945-3000
Owner/operator email:	Not reported
Owner/operator fax:	Not reported
Owner/operator extension:	Not reported
Legal status:	Private
Owner/Operator Type:	Operator
Owner/Op start date:	Not reported
Owner/Op end date:	Not reported

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	Yes
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No

IBM CORP - EASTVIEW RESEARCH FACILITY (Continued) **1000108752**

Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/11/2019

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers
Source: Department of Health
Telephone: 212-676-2444

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

HOSPITAL ROAD
HOSPITAL ROAD
HAWTHORNE, NY 10532

TARGET PROPERTY COORDINATES

Latitude (North):	41.090954 - 41° 5' 27.43''
Longitude (West):	73.806631 - 73° 48' 23.87''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	600229.8
UTM Y (Meters):	4549328.0
Elevation:	371 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5939761 WHITE PLAINS, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

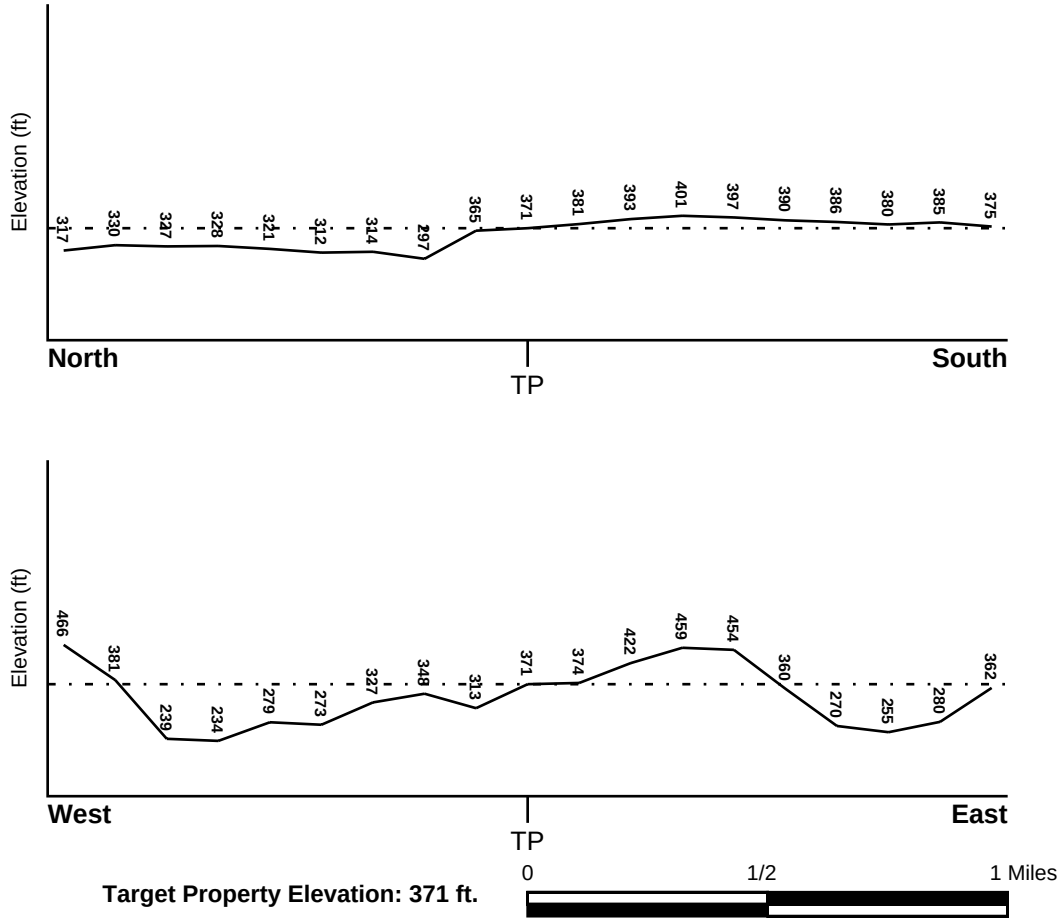

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type

36119C0254F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
WHITE PLAINS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

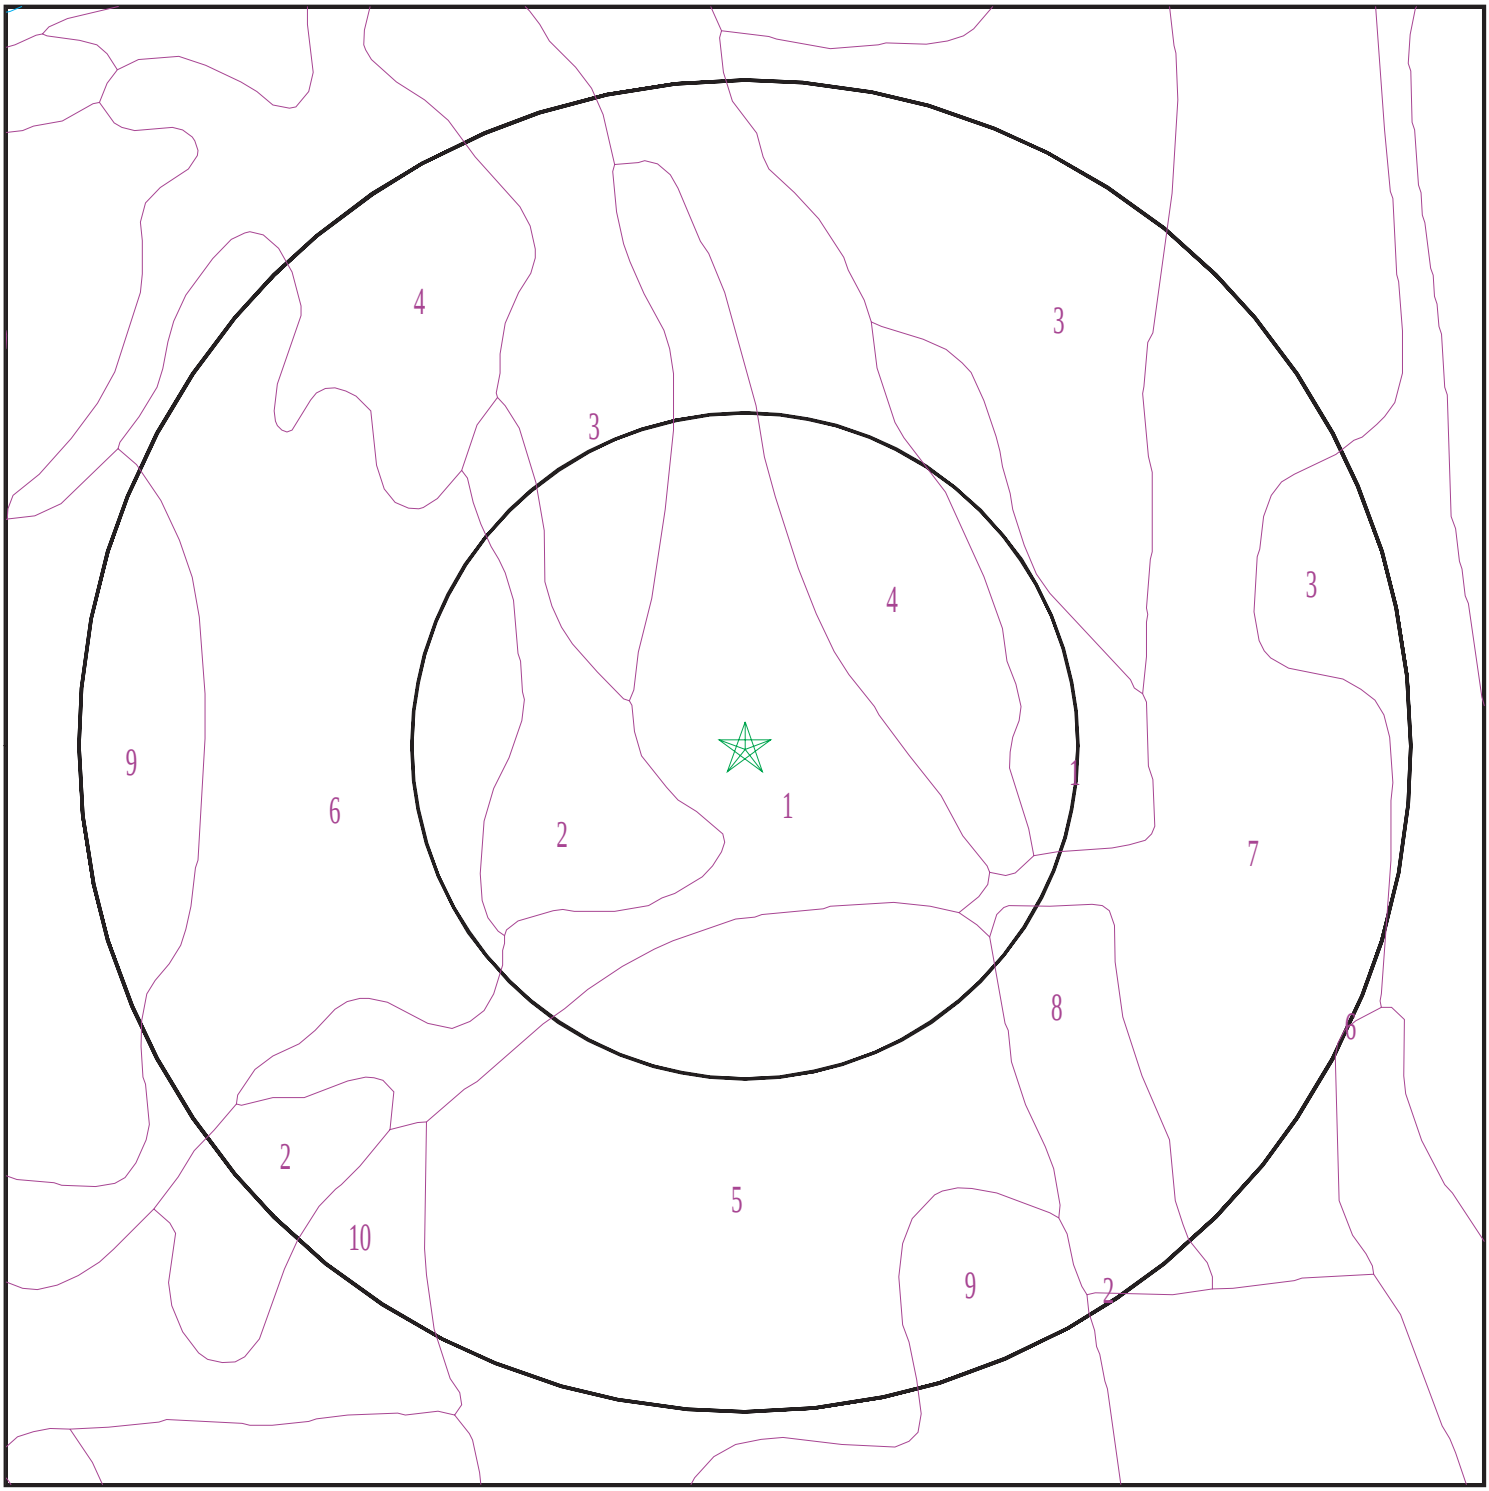

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Woodbridge

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 61 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 1.4 Min: 0.42	Max: 6 Min: 4.5
2	11 inches	29 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 1.4 Min: 0.42	Max: 6 Min: 4.5
3	29 inches	59 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 1.4 Min: 0.42	Max: 6 Min: 4.5

Soil Map ID: 2

Soil Component Name: Ridgebury

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 1.4 Min: 0.42	Max: 6.5 Min: 4.5
2	7 inches	25 inches	gravelly fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 1.4 Min: 0.42	Max: 6.5 Min: 4.5
3	25 inches	59 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 1.4 Min: 0.42	Max: 6.5 Min: 4.5

Soil Map ID: 3

Soil Component Name: Paxton

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 61 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 1.4 Min: 0.42	Max: 6 Min: 4.5
2	9 inches	20 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 1.4 Min: 0.42	Max: 6 Min: 4.5
3	20 inches	59 inches	gravelly sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 1.4 Min: 0.42	Max: 6 Min: 4.5

Soil Map ID: 4

Soil Component Name: Paxton

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 61 inches

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Tim Miller Associates were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Appendix E

Site Photographs

1) View of fields and woods in south central portion of Gateway Development Property, facing northwest.

2) View of mature woods in the northern portion of subject property, facing east.

3) View of the stream corridor on the eastern side of property, facing north.

4) View of West Stevens Avenue, with subject property at left, facing west.

5) View of a greenhouse for the former commercial nursery on Saw Mill River Road at the western side of property, facing west.

6) View of a garage for the former commercial nursery, facing east.

7) View of a drum of ethylene glycol in a garage for the former nursery, facing southeast.

8) View of the single-family residence at 44 Saw Mill River Road.

9) View of single-family residence at 42 Saw Mill River Road, facing south.

10) View of the underground fuel oil tank fill port at 42 Saw Mill River Road.

11) View of the single-family residence at 48A Saw Mill River Road, facing northwest.

12) View of the aboveground storage tank at the garage of 48A Saw Mill River Road, facing east.

13) View of residence at 48 Saw Miller River Road, facing southeast.

14) View of residence at Old Saw Mill River Road in northern portion of property, known as the “County House”, facing east.

15) View construction equipment and fill piles in south-central portion of site, facing south.

16) View of concrete debris and fill in south-central portion of site, facing west.

APPENDIX F

Site Owner/Representative
Questionnaire & Correspondence

Subject Property Owner/Representative (Key Site Manager)

Interview Date:	May 2019
Name:	Mr. Neil DeLuca
Title:	Property Owner Representative for western seven lots (116.08-1-3 through 116.08-1-8 and 111.20-1-80)
Company/Organizations:	North 80 LLC

How long have you owned the property? or How long have you be the acting property representative?

Since 2018. (Mr. DeLuca is the owner representative for the western seven lots only, approximately 20 acres. Westchester County is the owner of the eastern 60 acres).

What type of business is located at the Property?

No commercial businesses currently operate at the property. Five single family homes are located on the western seven lots. A commercial nursery formerly operated at the property.

What where the past businesses on the Property, if known?

A commercial nursery formerly operated on the property.

Are there any documents available for the subject Property? such as:

- Past Environmental Reports (any past reports of relevance) - Yes
- Compliance or Audit Reports - No
- Environmental Permits - No
- UST/AST Registrations - No
- Material Safety Data Sheets (MSDS) - No
- Correspondence with Government agencies - No
- Risk Assessments - No
- Recorded AULs (Activity and Use Limitations) - No

Owner Representative has provided a previous Phase 1 Assessment Update.

Do you know of any specific hazardous substances that are present or once were present at the Property?

Fuel oil tanks are present on the western seven lots related to the existing five residences.

Do you know of any petroleum spills or other hazardous substance releases that have occurred at the Property?

None known

Are there any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on or from the Property?

None known

Are there any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the Property?

None known

Do you know of any environmental cleanups that have taken place at the Property?

None known

Are there any notices from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?

None known

Do you have any other knowledge or experience with the Property that may be pertinent?

No.

Re: Phase I ESA Review & Database Update
81 Holly Hill Lane, LLC
42-48 Saw Mill River Road
Hawthorne, New York 10523

Dear Ms. Klingler:

Team Environmental Consultants, Inc. (TEAM), was requested by Greater Hudson Bank, to review a December 2010 TEAM Phase I Environmental Site Assessment (ESA) report and a current federal and state environmental database report for a commercial property located at 42-48 Saw Mill River Road in the Hamlet of Hawthorne, Town of Mount Pleasant, Westchester County, New York (Figure 1). The irregularly shaped 19.23-acre (~837,600-ft^2) property, which consists of seven adjoining tax parcels, is improved with five occupied single-family wood frame private residences and a former retail agricultural nursery (Nilsson Greenhouses). Active use of the nursery ceased in December of 2003. The nursery structures include seventeen greenhouse structures, four-bay storage garage, potting shed, office area, and former outdoor product display and sales areas. Proposed property development plans call for the demolition of all current site structures and construction of a commercial office and/or warehouse/distribution facility. No formal site improvement plans or timetable for construction activities have yet been finalized. All future site buildings will be provided with a municipal water supply and sanitary waste treatment service. A description of the tax parcels and present structures is presented as follows.

Tax Map Number	Lot Area/Address	Site Improvements
116.08-1-3	2.10-acres 48 Saw Mill River Road	One-story (with basement) ~1,700-ft^2 residence constructed circa-1958.
116.08-1-4	0.96-acres 48A Saw Mill River Road	One-story (with basement) ~1,500-ft^2 residence constructed circa-1930 and a detached two-bay wood frame ~750-ft^2 parking garage.
116.08-1-5	2.20-acres	Former Nilsson Greenhouses complex containing wood frame greenhouses, four-bay garage, office, and potting shed. The majority of the buildings were reportedly built circa-1965.

Tax Map Number	Lot Area/Address	Site Improvements
116.08-1-6	2.57-acres 42 Saw Mill River Road	One and part two-story (with basement) ~2,000-ft^2 residence with an attached ~600-ft^2 two-car parking garage constructed circa-1930.
116.08-1-7	1.00-acres 44 Saw Mill River Road	One-story (with basement) ~1,500-ft^2 residence with an attached ~600-ft^2 two-car parking garage constructed circa-1969.
116.08-1-8	2.57-acres 46 Saw Mill River Road	One-story (with basement) ~2,400-ft^2 residence with an attached ~600-ft^2 two-car parking garage constructed circa-1968.
111.20-1-80	7.52-acres	Undeveloped heavily wooded property (located within the northern section of the subject site).

The site is located within a Town of Mount Pleasant Zoning Class OB-6 (Office Building, Distribution, Limited Fabrication) district. Information obtained from the Town of Mount Pleasant Tax Assessor's Office indicated the subject parcels (Tax Map Section 116.08, Block 1, Lots 3-8 and Section 112.20, Block 1, Lot 80) to have been acquired by 81 Holly Hill Lane, LLC in June of 2008 from Gusto Enterprises, LLC and JSM Partners, LLC. According to Phase I ESA interviews, the family owned nursery business (Nilsson Greenhouses) had operated at this location for approximately 75-years. Prior to this date, the property had reportedly contained a pickle farm. The nursery was closed in December of 2003. The 46 and 48 Saw Mill River Road properties (Lots 7 and 8) have historically been used for residential purposes since the late-1960's. No information as to former use of the subject parcels for industrial or manufacturing purposes (i.e., activities that would be expected to have routinely produced regulated hazardous materials or waste products) was available during performance of the Phase I ESA.

December 2010 - Phase I Environmental Site Assessment Report

In November of 2010, TEAM was authorized by Greater Hudson Bank to conduct a Phase I ESA of the 42-48 Saw Mill River Road property. The scope of work included the following main tasks: 1) Review of readily available regulatory information; 2) Performance of site/regulatory interviews and a walk-through property inspection; 3) Coordination and oversight of underground petroleum storage tank (UST) tightness testing and removal activities; 4) Review of previously prepared environmental reports and a federal/state environmental database report; and 5) Documentation of findings in a Phase I ESA report.

Based on the property setting and planned site use, availability of a municipal water supply, review of available information, performance of Phase I ESA interviews, and findings of the property walk-through inspection and UST testing/removal work, no significant and immediate environmental liability issues or "recognized environmental conditions" associated with the subject property were identified in TEAM's December 7, 2010 Phase I ESA report (text portion provided within Attachment A). No follow-up environmental site investigations were recommended.

Federal and State Database Report

To obtain updated information pertaining to the subject and neighboring properties, TEAM has obtained an Environmental Data Resources (EDR) Database Report, which provides information concerning the target property and those sites listed within any of the following Federal and State environmental databases:

- National Priority List (NPL);
- Resource Conservation and Recovery Information System (RCRIS);
- New York State/Tribal Brownfield Sites (BROWNFIELD);
- New York State Spills Database (SPILLS);
- Comprehensive Environmental Response, Compensation, and Liability System (CERCLIS);
- CERCLIS "No Further Remedial Action Planned" Sites (NFRAP);
- New York State Registry of Inactive Hazardous Waste Disposal Sites (SHWS);
- Hazardous Waste Manifest Data (MANIFEST);
- Air Facility System (US AIRS);
- Emergency Response Notification System (ERNS);
- New York Leaking Storage Tanks (LUST);
- Registered Dry Cleaners (DRYCLEANERS);
- Hazardous Waste Manifest Data (MANIFEST);
- New York State DEC Voluntary Cleanup Program (VCP);
- New York Active Solid Waste Facility Register (SWL); and
- New York Registered Bulk Storage Tanks (UST/AST).

The EDR Database Report presented in Attachment B, identified no NPL, CERCLIS, NFRAP, ERNS, SHWS, VCP, SPILLS, DRYCLEANERS, SWL, or BROWNFIELD sites within the survey radius. Two LUST sites are found within a one-eighth to one-quarter mile distance. The 42-48 Saw Mill River Road property (Nilsson Nurseries) was identified in the LUST and UST Databases. The LUST Database Spill Date was listed as January 7, 2000 (contaminated soil found during the removal of a gasoline storage tank - NYSDEC Spill No. 99-11690). The issued Spill Number was indicated to have been "closed" on December 21, 2001. The UST Database noted the site to have been registered with the NYSDEC Petroleum Bulk Storage (PBS) Program as PBS No. 3-800561. Identified "closed-removed" USTs included two 1,000-gallon gasoline and two 3,000-gallon No. 2 fuel oil tanks. Tank closure and site remediation activities were documented within TEAM's Phase I ESA report. The PBS Status was shown to be "Unregulated." As the subject property will be serviced with a municipal water supply, the proximity of EDR identified sites would not appear to impact or pose significant environmental liabilities with respect to planned future development or water quality issues.

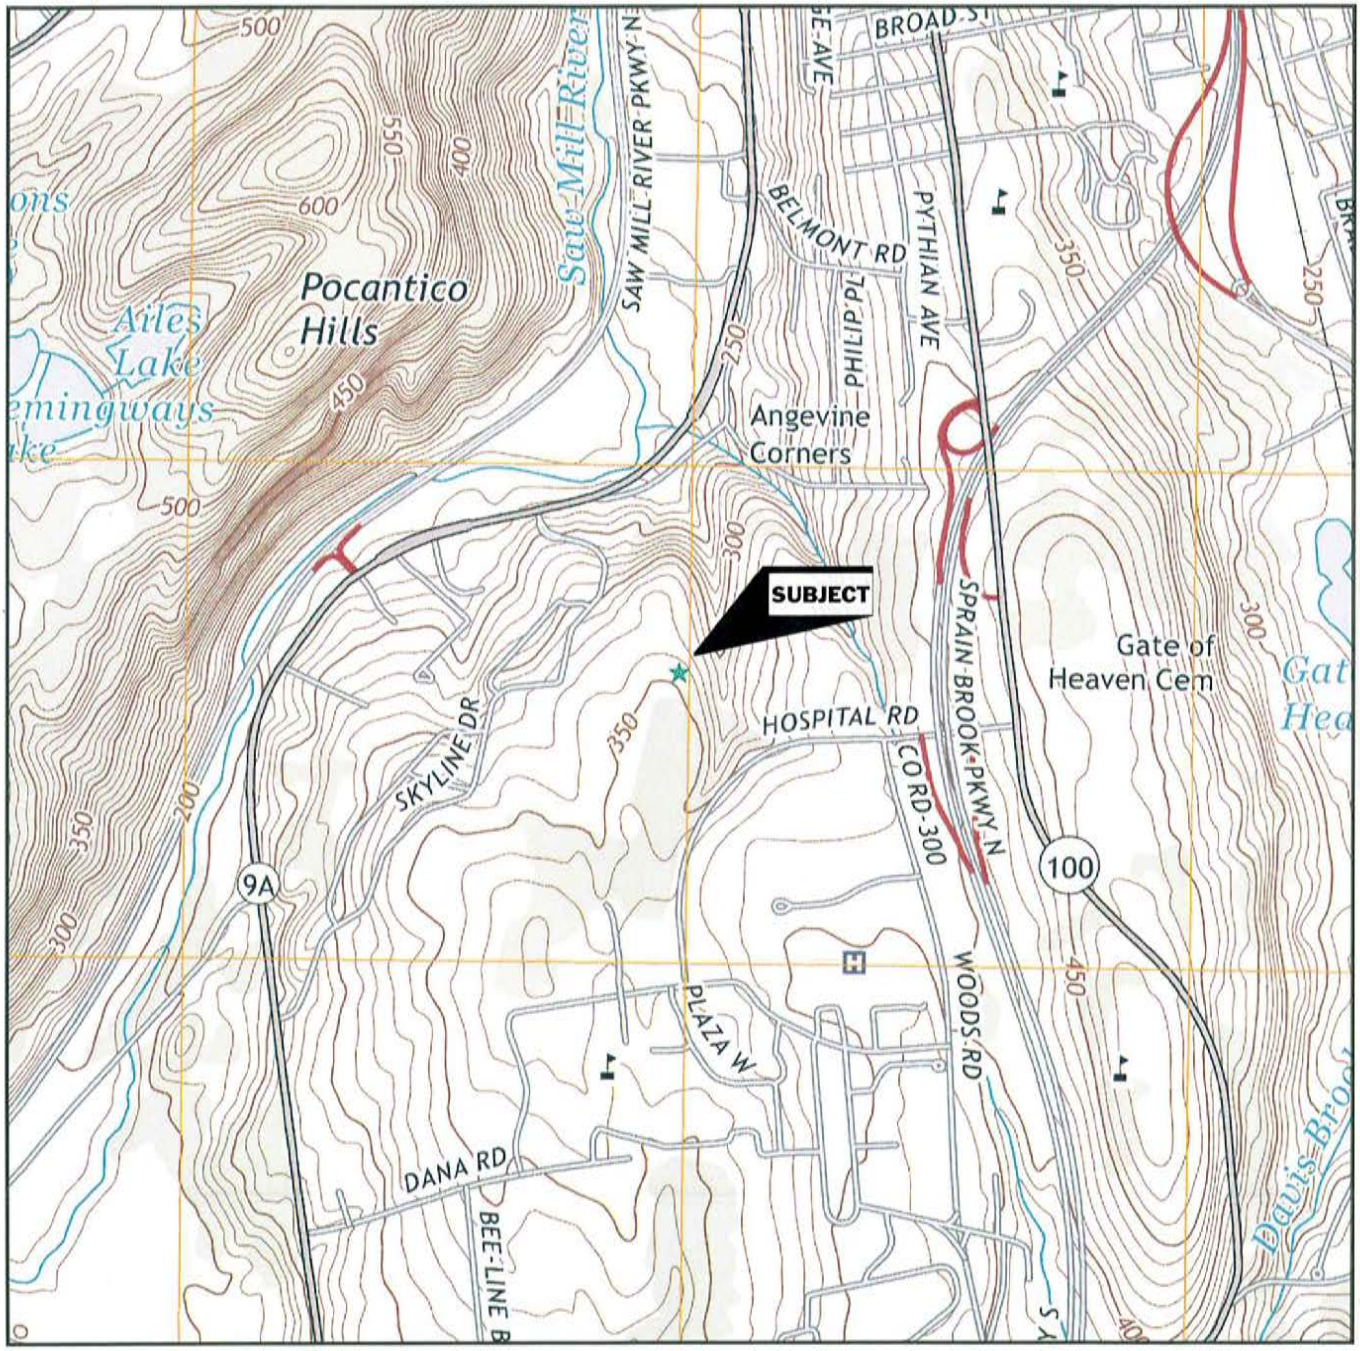

TEAM Conclusions

Based on the property setting, availability of a municipal water supply, and review of previously prepared environmental reports and an updated environmental database report, no significant and immediate environmental liability issues or "recognized environmental conditions" associated with the 42-48 Saw Mill River Road property can be identified. No follow-up environmental site investigations are recommended. If you have any questions or require additional information, please feel free to contact me at (845) 692-8124.

1.0 EXECUTIVE SUMMARY

Team Environmental Consultants, Inc. (TEAM), was authorized by Greater Hudson Bank, N.A. to conduct a Phase I Environmental Assessment (Due Diligence Survey) of a commercial property located at 42-48 Saw Mill River Road in Hawthorne, New York. TEAM's Phase I Environmental Site Assessment (ESA) was conducted in general conformance with ASTM Practice E 1527-05 (Standard Practice for Phase I ESA Process) guidelines. The objective of this effort was to identify significant environmental impairments and liabilities associated with the subject property. The requested scope of work included the following main tasks: 1) Review of readily available regulatory information; 2) Performance of site/regulatory interviews and a walk-through property inspection; 3) Coordination and oversight of underground petroleum storage tank (UST) tightness testing and removal activities; 4) Review of previously prepared environmental reports and a federal/state environmental database report; and 5) Documentation of findings in a Phase I ESA Report.

Based on the property setting and planned commercial site use, availability of a municipal water supply, review of available information, performance of Phase I ESA interviews, and findings of the property walk-through inspection and UST testing/removal work, no significant and immediate environmental liability issues or "recognized environmental conditions" associated with the subject property were identified.

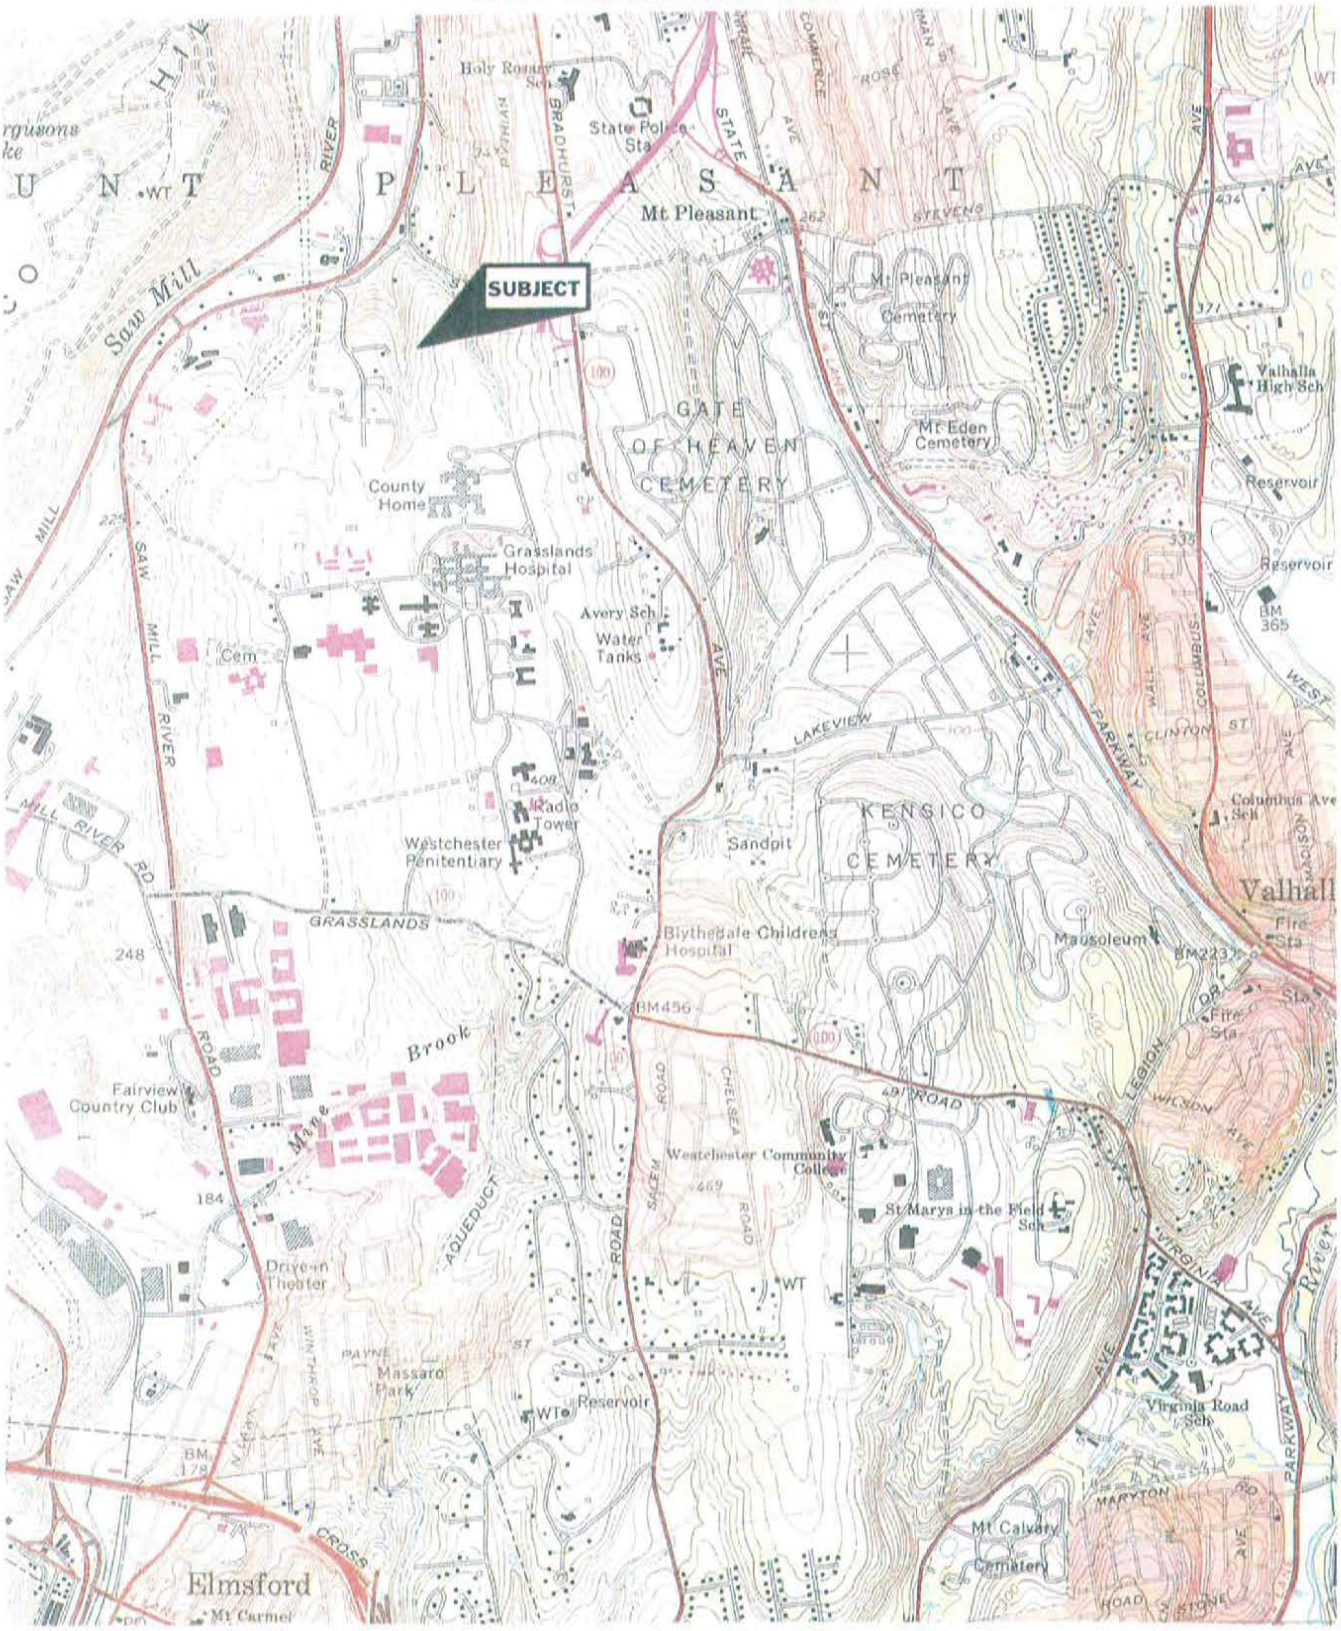

2.0 PROPERTY DESCRIPTION

2.1 Site Description

The subject property is located along the eastern side of Saw Mill River Road, approximately 800-feet southeast of the Saw Mill River Parkway, in the Hamlet of Hawthorne, Town of Mount Pleasant, Westchester County, New York (Figures 1 and 2). The site is bordered to the north by undeveloped property, Old Saw Mill River Road, and Saw Mill River Road (New York Route 9A), to the east by undeveloped wooded property (Grasslands Reservation), to the south/southeast by wooded property and the Westchester Medical Center Campus, and to the west by Saw Mill River Road and a fourteen building professional office park complex (Mid Westchester Executive Park) and associated paved parking areas. The site topography is variable and at grade with Saw Mill River Road. Photographs obtained during performance of the property walk-through inspection are presented within Attachment A.

The irregularly shaped 19.23-acre (~837,600-ft^2) property, which consists of seven adjoining tax parcels, is improved with five occupied single-family wood frame private residences and a former

retail agricultural nursery (Nilsson Greenhouses). Active use of the nursery ceased in December of 2003. The nursery structures include seventeen greenhouse structures, four-bay storage garage, potting shed, office area, and former outdoor product display and sales areas. Proposed property development plans call for the demolition of all current site structures and construction of a commercial office and or warehouse/distribution facility. All future site buildings will be provided with a municipal water supply and sanitary waste treatment service. No formal site improvement plans or timetable for construction have yet been finalized. A description of the tax parcels and present structures is presented as follows.

Tax Map Number	Lot Area/Address	Present Site Improvements
116.08-1-3	2.10-acres 48 Saw Mill River Road	One-story (with basement) ~1,700-ft^2 residence constructed circa-1958.
116.08-1-4	0.96-acres 48A Saw Mill River Road	One-story (with basement) ~1,500-ft^2 residence constructed circa-1930 and a detached two-bay wood frame ~750-ft^2 parking garage.
116.08-1-5	2.20-acres	Former Nilsson Greenhouses complex containing wood frame greenhouses, four-bay garage, office, and potting shed. Majority of buildings were reportedly built circa-1965.
116.08-1-6	2.57-acres 42 Saw Mill River Road	One and part two-story (with basement) ~2,000-ft^2 residence with attached ~600-ft^2 two-car parking garage constructed circa-1930.
116.08-1-7	1.00-acres 44 Saw Mill River Road	One-story (with basement) ~1,500-ft^2 residence with attached ~600-ft^2 two-car parking garage constructed circa-1969.
116.08-1-8	2.57-acres 46 Saw Mill River Road	One-story (with basement) ~2,400-ft^2 residence with attached ~600-ft^2 two-car parking garage constructed circa-1968.
111.20-1-80	7.52-acres	Undeveloped heavily wooded property (located within northern section of subject site).

The site is located within a Town of Mount Pleasant Zoning Class OB-6 (Office Building, Distribution, Limited Fabrication) district. The potable water supply for the onsite residences is provided by individual wells situated proximate to each structure. No well construction details (i.e., date of installation, depth, design) or historic laboratory testing data were available. Two other onsite wells were formerly utilized for agricultural purposes (i.e., non-potable use). Sanitary waste

is treated by onsite septic systems. The residences are heated with fuel oil fired furnace units. Heating oil is stored within five underground storage tanks (Section 2.9). Electrical service is supplied to the area by Consolidated Edison Utilities (ConEd). Non-hazardous solid waste is removed for offsite disposal by a private hauler. Utility connections are located both aboveground and underground.

2.2 Site History

Information obtained from the Town of Mount Pleasant Tax Assessor's Office indicates the subject parcels (Tax Map Section 116.08, Block 1, Lots 3-8 and Section 112.20, Block 1, Lot 80) to have been acquired by 81 Holly Hill Lane, LLC in June of 2008 from Gusto Enterprises, LLC and JSM Partners, LLC. John Fareri is the principal owner of all three entities. Lots 3-6 and 80 were acquired by Gusto Enterprises, LLC in December of 2003 from Elsa Bailey, L. William Bailey, J.W. Mantz, and Karen Bailey. These parcels contain three private residences (formerly tenanted by Nilsson Greenhouses property owners/operators) and the former nursery structures. Lots 7 and 8 were purchased by JSM Partners, LLC in January of 2008 from Heidi Fitzgerald and James and Elizabeth Fitzgerald, respectively. No previously prepared title searches or documentation detailing historic property ownership were available for TEAM review. None of the owners on record appear to have been an industrial concern that would be expected to have utilized the property for the storage, usage, or disposal of chemicals or hazardous materials.

According to Phase I ESA interviews, the family owned nursery business (Nilsson Greenhouses) had operated at this location for approximately 75-years. Prior to this date, the property had reportedly contained a pickle farm. The nursery was closed in December of 2003. The 46 and 48 Saw Mill River Road properties (Lots 7 and 8) have historically been used for residential purposes since the late-1960's. No documentation detailing historic site development or the performance of building construction or renovation efforts was available. No information as to former use of the subject parcels for industrial or manufacturing purposes (i.e., activities that would be expected to have routinely produced regulated hazardous materials or waste products) was available during performance of the Phase I ESA.

2.3 User Provided Information

No previously prepared title records, information concerning environmental liens, property use limitations, valuation reduction based on environmental issues, or commonly known/reasonably ascertainable information that is material to recognized environmental conditions in connection with the subject site was provided to TEAM during performance of the Phase I ESA.

2.4 Aerial Photograph Review

Aerial photographs of the subject property vicinity were reviewed by TEAM to assist with the evaluation of historic property use. Photographs were obtained from an on-line Google Earth (April 1994, March 2002, April 2004, and June 2010) web site. All four figures identify the present residential and nursery business structures and associated paved parking/driveway areas. Surrounding properties appear to be undeveloped (east/south) or used for commercial office park purposes (west). None of the inspected photographs revealed readily apparent evidence of significant site disturbances or large scale manufacturing or industrial site use. The scale and clarity of these photographs precluded an in-depth inspection of the property for visual evidence of environmental impairment (e.g., aboveground petroleum storage tanks, fuel dispensing pumps, illegal dumping). Copies of referenced figures are found in Attachment B.

2.5 Fire Insurance Map Review

A 1942 Fire Insurance Map was obtained for the Hawthorne property area (copy presented within Attachment C). Review of this figure (difficult due to poor clarity and the absence of readily identifiable property boundaries) indicates the subject property to be undeveloped. No other fire insurance maps were available for the subject property location.

2.6 Previously Prepared Environmental Reports

In May of 2003, TEAM was authorized by Gusto Enterprises, LLC to prepare a Phase I Environmental Site Assessment (ESA) Update report for the 42 and 48/48A Saw Mill River Road properties (Lots 3-6 and 80). The scope of work included performance of a site walk-through inspection, interviews with property and business owners, Karen Mantz and William Bailey, review of a 2001 Ira D. Conklin & Sons Phase I ESA and Underground Storage Tank (UST) Closure reports, tightness testing of five onsite underground storage tanks, and performance of a limited soil and groundwater sampling investigation. Presented as follows is a description and review of provided reports and information concerning tank testing and field sampling activities.

2001 - Phase I Environmental Site Assessment Report

The Phase I ESA report was prepared by Ira D. Conklin & Sons, Inc. (IDC) of Newburgh, New York The scope of work consisted of a review of available regulatory documentation and site history, performance of a property walkthrough inspection, and review of a federal/state environmental database report. No field sampling activities (e.g., soil/groundwater) were conducted during

performance of the site investigation. The following "environmental conditions" were identified in the IDC report:

- Open New York State Department of Environmental Conservation (NYSDEC) Spill Number 99-11690 (issued during IDC's removal of two underground gasoline storage tanks on January 7, 2000 and subsequently "closed" by the NYSDEC on December 21, 2001);
- Presence of unregistered underground and aboveground petroleum storage tanks;
- Identified drum storage and handling procedures; and
- Identified presence of "miscellaneous" debris.

December 10, 2001 - UST Closure Report

The underground storage tank (UST) closure report documents the January 7, 2000 removal of two 1,000-gallon capacity gasoline USTs. The report notes the subject property to have been registered with the NYSDEC Petroleum Bulk Storage Program as PBS No. 3-800561. The IDC scope of work included removal and offsite disposal of the two tanks and residual product, screening of the former tank beds with a photoionization detector (PID), and collection of soil samples for laboratory analysis. The IDC report noted both tanks to have been found to be in "poor condition - holes present" following removal. Approximately 50-100 tons of contaminated soil were indicated to have been excavated and stockpiled onsite. Based on identified tank conditions, NYSDEC Spill No. 99-11690 was issued to the site.

During TEAM's May 20, 2003 property inspection, Nilsson Greenhouses President, William Bailey, informed TEAM that both tanks were found to have been in generally good condition following removal. He indicated that a small quantity (two to three yards) of contaminated soil was discovered following excavation of the westernmost UST (located proximate to a greenhouse structure). The source of contamination was attributed to historic "overfilling" of the tank.

To clarify information contained within the IDC UST Closure Report, a telephone interview was conducted with report author, Stacey Smit, on June 27, 2003. Ms. Smit indicated that neither she nor document co-writer, Edward Sprague (no longer with IDC), were present during the performance of the January 7, 2000 tank removal field effort. Ms. Smit was unable to locate any photographs, field notes, or contaminated soil waste shipment manifests. She was, however, able to identify an IDC employee (Jesse Hicks) who participated in the tank closure event. Mr. Hicks informed TEAM during a telephone interview that only a small quantity of contaminated soil

"small dump truck load" was excavated from only one of the former tank beds. He recalled both USTs to have been in generally good condition.

TEAM was provided with correspondence dated December 21, 2001 from Westchester County Health Department of Health (WCDOH) Office of Environmental Health Risk Control Sanitarian, Stefan Goreau. The WCDOH administers the NYSDEC Petroleum Bulk Storage Program in Westchester County. This letter stated that, "The site closure report for the removal of the two underground petroleum storage tanks at the above referenced site was received by this Department. The results of the soil samples taken were satisfactory when compared with the New York State Department of Environmental Conservation's Technical and Administrative Guidance Memorandum #4046. It is the recommendation of this Department that this site requires No Further Action."

Underground Storage Tank Testing

Based on the unknown ages or integrity of the five onsite USTs (two 3,000-gallon fuel oil tanks used by the nursery business and three 1,000 and 2,000-gallon heating oil tanks associated with the onsite residences), TEAM recommended that all tanks be precision tested. Said tightness tests was conducted on June 10, 2003 by U.S. Tank Tech of Carmel, New York. The USTs were tested utilizing the Horner EZY Chek 3 Locator Plus system (NYSDEC approved methodology). The findings of the tightness tests indicated all tanks to have passed the precision test (i.e., met established U.S. EPA testing guidelines).

Water Supply Well Sampling

The potable water supply for the three residences is provided by wells situated proximate to each structure. No well construction details (i.e., date of installation, depth, design) or historic laboratory testing data were available. Based on the absence of current water quality data, sampling of the two "downgradient" wells (48 and 48A Saw Mill River Road residences) was conducted by TEAM on June 10, 2003. Samples were collected from kitchen taps. Prior to sampling, the water was allowed to run approximately twenty minutes to ensure collection of a representative groundwater sample.

Laboratory supplied containers were used for collecting the water samples. The samples were placed in coolers and transported to York Analytical Laboratories, Inc. located in Stamford, Connecticut and analyzed by U.S. EPA Method 502.2. The results of chemical analysis revealed the presence only one volatile and no semi-volatile organic compounds at concentrations above

the method driven analytical detection limits. The detected volatile organic compound was toluene, which was found at a concentration of 0.6 (48 Saw Mill River Road) and 0.5 (48A Saw Mill River Road) ug/l (parts per billion - ppb). The NYSDEC Drinking Water Standard for toluene is 5.0 ug/l. Based on review of these data, no significant environmental concerns associated with the potable water supply were identified. All future site structures will be provided with a municipal water supply.

Limited Soil Sampling Investigation

To identify significant environmental concerns associated with former site operations, a limited soil sampling field investigation was conducted proximate to the onsite greenhouse structures. Sampling locations were found between the within the upper greenhouses (SS-1), between temporary greenhouses 3 and 4 (SS-2), and between greenhouses 9 and 10 (SS-3). Each composite surficial soil samples was collected from three locations at a depth of approximately 3-5 inches below grade. Collected samples were transported to York Analytical Laboratories, Inc. and analyzed for pesticides (EPA Method 8080) and herbicides (EPA Method 8150). The results of chemical analysis revealed the presence of no targeted herbicide parameters at concentrations above the method driven analytical detection limits. As indicated in the following table, several pesticide compounds were detected in each sample. The concentrations of all detected compounds were, however, below established NYSDEC TAGM (Technical and Administrative Guidance Memorandum No. 4046) guideline values.

Detected Pesticide Compound	Soil Sample SS-1	Soil Sample SS-2	Soil Sample SS-3	NYSDEC TAGM Soil Cleanup Objective
4,4-DDD	ND	18.8	ND	2900
4,4-DDE	149	136	143	2100
4,4-DDT	66.3	128	84.7	2100
Chlordane	ND	238	ND	540

Notes:

- All samples were analyzed by U.S. EPA Method 8080;
- ND - Concentration below method driven analytical detection limit;
- This table summarizes parameters detected above the method driven detection limit; and
- All noted concentrations are in parts per billion (ug/kg).

Based on review of provided documentation, performance of the property walk-through inspection and site/regulatory interviews, findings of the limited soil and groundwater sampling investigation, and availability of a municipal water supply (for future property development), no significant and immediate environmental liability issues associated with the subject property were identified in TEAM's June 30, 2003 Phase I ESA Update report.

2.8 November 2010 No. 2 Fuel Oil UST Closure Activities

As previously indicated, two 3,000-gallon capacity No. 2 fuel USTs (formerly used to heat the nursery structures) were located within Lot 5. The tanks have not been actively used since 2003. As per NYSDEC/WCDOH regulations, permanent closure (i.e., removal) was required. Prior to the performance of field work by Dutchess Environmental Contractors (Dutchess), the USTs were registered with the WCDOH PBS Program as PBS No. 3-800561. Permits were also obtained from the WCDOH (PBS Work Permit) and Town of Mount Pleasant Building Department. Tank closure work was conducted on November 4, 2010. The tanks and excavation were inspected by WCDOH and Town of Mount Pleasant representatives. A Dutchess UST Closure Report which documented the performance of tank cleaning and closure operations was submitted to the WCDOH Office of Environmental Health Risk Control and Town of Mount Pleasant for review. This document presented the following information.

- "Based on a visual inspection, there was no product leakage and no soil contamination. As per WCDOH at the time of inspection, five soil samples consisting of four walls & bottom composite 8260/8270 STARS soil samples were collected for analysis from the excavation. The tank grave was backfilled, compacted, and raked. The two 3,000 gallon USTs were disposed of at Brookfield Resource Management in Elmsford, New York. Soil and sample analysis indicated all targeted volatile and semi-volatile organic compounds non-detect or below NYSDEC CP-51 guidelines."

No follow-up activities were recommended. A copy of the November 18, 2010 Dutchess UST Closure Report is found in Attachment D.

2.9 November 2010 UST Testing

The five onsite residences are heated by fuel oil fired systems. Each residential parcel contains a steel heating oil UST with capacities of 1,000-2,000-gallons. All tanks will be permanently closed (i.e., removed) as part of the planned site development work. To confirm the absence of current environmental concern, TEAM recommended that as part of the Phase I ESA effort, the USTs be tightness tested. Said work was conducted by EcoLogic Environmental (EcoLogic) of Sparta,

New Jersey on November 22, 2010. The tanks were tested utilizing an Estabrook EZY 3 Locator Plus system (NYSDEC approved methodology). The findings of the tightness tests indicated the tanks associated with the 42, 44, 48, and 48A Saw Mill River Road residences to have "passed" the precision test (i.e., met established U.S. EPA testing guidelines). Testing of the 46 Saw Mill River UST could not be conducted due to a damaged vent pipe. In lieu of testing, two soil samples were collected along the exterior sides of the tank (~76-80 inches below grade). No petroleum odors or visual evidence of staining were reported during the EcoLogic soil collection effort. A composite sample was submitted for analysis of Diesel Range Organics (DRO) utilizing EPA Method 8015. Laboratory results indicated no detectable DRO parameters. EcoLogic concluded that, "No contamination was detected around the underground storage tank located at 46 Saw Mill River Road." Tank testing and soil sampling documentation is found in Attachment E.

3.0 SITE INSPECTION

On November 22, 2010, TEAM conducted an inspection of the subject property. None of the onsite residences or former nursery structures were accessible for inspection. The authorized scope of work did not include performance of any field sampling activities (e.g., soil, groundwater, or asbestos) or completion of a formal regulatory compliance audit, as it would relate to the use, handling, storage, permitting, or disposal of regulated materials and waste products. A listing of Phase I ESA interview and information sources is presented as Attachment F.

3.1 Property Inspection

The inspection of accessible property areas (difficult and limited due to the size of the property and presence of parked vehicles, stored materials and nursery business supplies, vegetation, and leaf litter) revealed no unusual odors or visual evidence of significant surface staining that could be indicative of leaking petroleum storage tanks, chemical spills, or industrial waste disposal. No PCB-labeled electrical equipment, aboveground petroleum or chemical storage tanks, unmarked waste storage drums, stormwater collection drains, groundwater monitoring wells, or industrial waste storage or disposal facilities within the property confines were observed. No surface water bodies or significant freshwater wetland habitat areas were observed within or adjacent to the subject property. The nearest surface water body (Saw Mill River) is found approximately 200-feet northwest of Lot 80 (northern most tax parcel). The authorized scope of work did not include performance of formal flood plain or wetland delineation surveys.

During performance of TEAM's May 20, 2003 property inspection, four aboveground heating oil storage tanks (ASTs) ranging in capacity from 275 to 3,000-gallons were identified onsite. All ASTs were found to have been removed from the site. According to former property and

business owner, Karen Mantz, no hazardous waste products requiring RCRA manifesting procedures were produced as a result of routine nursery operations. Interviews with current site residents, Steve Marchwinski (42 Saw Mill River Road), Scott Benson (48A Saw Mill River Road), and Louis Popolla (44 Saw Mill River Road), indicated the residential structures to be in good condition and well maintained. None of these individuals were aware of any issues of adverse environmental concern associated with the subject property.

Due to the age of the onsite buildings, asbestos containing materials (ACM) may be associated with these structure. No information concerning the performance of asbestos inspection or abatement operations associated with historic building renovation efforts was available. The authorized Phase I ESA scope of work did not include performance of a formal asbestos inspection or sampling survey. A formal asbestos inspection will be required by the Town of Mount Pleasant prior to the issuance of any future building demolition permits.

4.0 RECORDS REVIEW AND DOCUMENTATION

4.1 Regulatory Review - Town of Mount Pleasant

TEAM contacted the Town of Mount Pleasant and requested permission to review available files maintained by the offices of the Building Department and Fire Inspector's Office. Review of provided information revealed assorted correspondence and building permit applications for historic site renovation activities. No regulatory information detailing historic site development was available. Interviewed Building Department representatives were unaware of any environmental issues associated with the subject 42-48 Saw Mill River Road property or neighboring commercial properties which could impact the subject site.

4.2 Regulatory Review - NYSDEC & Westchester County Health Department

The requested Phase I ESA time frame precluded submittal of a Freedom of Information Legislation (FOIL) request to NYSDEC Region 3 or Westchester County Health Department Office of Environmental Health Risk Control, which administers the NYSDEC Petroleum Bulk Storage Program in Westchester County.

4.3 Federal and State Database Report

TEAM has obtained an Environmental FirstSearch Network (EFSN) Site Assessment Report which provides information concerning the target property and those sites located within an ASTM established radius and listed in any of the following Federal and State databases:

- National Priority List (NPL);
- Resource Conservation and Recovery Information System (RCRIS),
  Large Quantity Generators and TSD Facilities,
  Small Quantity Generators and Transporters;
- New York State/Tribal Brownfield Sites (BROWNFIELD);
- New York State Spills Database (SPILLS);
- Comprehensive Environmental Response, Compensation, and Liability System (CERCLIS);
- CERCLIS "No Further Remedial Action Planned" Sites (NFRAP);
- New York State Registry of Inactive Hazardous Waste Disposal Sites (STATE);
- Emergency Response Notification System (ERNS);
- New York Leaking Storage Tanks (LUST);
- New York State DEC Voluntary Cleanup Program (VCP);
- New York Active Solid Waste Facility Register (SWL); and
- New York Registered Bulk Storage Tanks (UST/AST).

The EFSN Database Report presented in Attachment G, identifies no NPL, CERCLIS, NFRAP, STATE, ERNS, VCP, or BROWNFIELD sites within the ASTM established survey radius. One SWL, ten SPILLS, and twenty-one LUST sites are found within a one-quarter to one-half mile distance. The subject property (Nilsson Nurseries - 48 Saw Mill River Road) is identified in the SPILLS Database. The Spill Date is referenced as January 7, 2000 (contaminated soil found during removal of gasoline storage tank - NYSDEC Spill No. 99-11690). The issued Spill Number is indicated to have been "closed" on December 21, 2001. The closest LUST site (Frem 22 Company) is situated northwest of the target property at 22 Saw Mill River Road. The Spill Date is listed as January 11, 2002 (reported No. 2 fuel oil tank test failure - NYSDEC Spill No. 01-09836). The remedial status is noted to be "closed." The proximity of EFSN identified sites would not appear to impact or pose significant environmental liabilities with respect to planned commercial site use or water quality issues.

5.0 CONCLUSIONS

Based on the property setting and planned commercial site use, availability of a municipal water supply, review of available information, performance of Phase I ESA interviews, and findings of the property walk-through inspection and UST testing/removal work, no significant and immediate environmental liability issues or "recognized environmental conditions" associated with the subject property were identified.

6.0 LIMITATIONS

The conclusions stated are based on the limits of the investigation described herein. TEAM can offer no assurances and assumes no responsibility for site conditions or activities which were outside the scope of the inquiry requested. It should be understood that TEAM has relied on the accuracy of documents, oral information, and other material and information provided by sources documented in this report. There can be no assurance, and TEAM offers no assurance, that site conditions do not exist or could not exist in the future which were undetected and which could lead to liability in connection with the site. Similarly, past and present activities on the site indicating potential environmental concerns may not have been discovered by TEAM's inquiries. The Phase I Environmental Site Assessment was prepared for reliance by Community Mutual Savings Bank, Greater Hudson Bank, N.A. and 81 Holly Hill Lane, LLC.

Tank Test:

Database Descriptions

NPL: NPL National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices. NPL - National Priority List Proposed NPL - Proposed National Priority List Sites.

NPL Delisted: Delisted NPL The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Delisted NPL - National Priority List Deletions

CERCLIS: SEMS SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL. SEMS - Superfund Enterprise Management System

NFRAP: SEMS-ARCHIVE SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site. SEMS-ARCHIVE - Superfund Enterprise Management System Archive

RCRA COR ACT: CORRACTS CORRACTS identifies hazardous waste handlers with RCRA corrective action activity. CORRACTS - Corrective Action Report

RCRA TSD: RCRA-TSDF RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste. RCRA-TSDF - RCRA - Treatment, Storage and Disposal

RCRA GEN: RCRA-LQG RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. RCRA-LQG - RCRA - Large Quantity Generators RCRA-SQG - RCRA - Small Quantity Generators. RCRA-CESQG - RCRA - Conditionally Exempt Small Quantity Generators.

Federal IC / EC: US ENG CONTROLS A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. US ENG CONTROLS - Engineering Controls Sites List US INST CONTROL - Sites with Institutional Controls.

Database Descriptions

ERNS: ERNS Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances. ERNS - Emergency Response Notification System

State/Tribal CERCLIS: SHWS Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites SHWS - Inactive Hazardous Waste Disposal Sites in New York State

State/Tribal SWL: SWF/LF Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites. SWF/LF - Facility Register

State/Tribal LTANKS: LTANKS Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. LTANKS - Spills Information Database HIST LTANKS - Listing of Leaking Storage Tanks.

State/Tribal Tanks: UST Facilities that have petroleum storage capacities in excess of 1,100 gallons and less than 400,000 gallons. UST - Petroleum Bulk Storage (PBS) Database CBS UST - Chemical Bulk Storage Database. MOSF UST - Major Oil Storage Facilities Database. CBS - Chemical Bulk Storage Site Listing. MOSF - Major Oil Storage Facility Site Listing. AST - Petroleum Bulk Storage. CBS AST - Chemical Bulk Storage Database. MOSF AST - Major Oil Storage Facilities Database. TANKS NASSAU - Registered Tank Database in Nassau County. TANKS - Storage Tank Faciliy Listing.

State/Tribal IC / EC: ENV RES DECL RES DECL - Restrictive Declarations Listing. The Environmental Restrictive Declarations (ERD) listed were recorded in connection with a zoning action against the noted Tax Blocks and Tax Lots, or portion thereof, and are available in the property records on file at the Office of the City Register for Bronx, Kings, New York and Queens counties or at the Richmond County Clerk's office. They contain environmental requirements with respect to hazardous materials, air quality and/or noise in accordance with Section 11-15 of this Resolution. RES DECL - Environmental Restrictive Declarations ENG CONTROLS - Registry of Engineering Controls. INST CONTROL - Registry of Institutional Controls.

State/Tribal VCP: VCP New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites. VCP - Voluntary Cleanup Agreements

ST/Tribal Brownfields: BROWNFIELDS A Brownfield is any real property where redevelopment or re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant. BROWNFIELDS - Brownfields Site List ERP - Environmental Restoration Program Listing.

US Brownfields: US BROWNFIELDS Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs. US BROWNFIELDS - A Listing of Brownfields Sites

Database Descriptions

Other Haz Sites: US CDL A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments. US CDL - Clandestine Drug Labs

Other Tanks: CORTLAND CO. UST A listing of underground storage tank sites located in Cortland County. CORTLAND CO. UST - Cortland County Storage Tank Listing WESTCHESTER CO. UST - Listing of Storage Tanks. NASSAU CO. UST - Registered Tank Database. ROCKLAND CO. UST - Petroleum Bulk Storage Database. SUFFOLK CO. UST - Storage Tank Database. NCFM UST - Storage Tank Database. HIST UST - Historical Petroleum Bulk Storage Database. CORTLAND CO. AST - Cortland County Storage Tank Listing. WESTCHESTER CO. AST - Listing of Storage Tanks. NASSAU CO. AST - Registered Tank Database. ROCKLAND CO. AST - Petroleum Bulk Storage Database. SUFFOLK CO. AST - Storage Tank Database. NCFM AST - Storage Tank Database. HIST AST - Historical Petroleum Bulk Storage Database.

Spills: HMIRS Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT. HMIRS - Hazardous Materials Information Reporting System SPILLS - Spills Information Database. HIST SPILLS - SPILLS Database. SPILLS 90 - SPILLS90 data from FirstSearch. SPILLS 80 - SPILLS80 data from FirstSearch.

Other: RCRA NonGen / NLR RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste. RCRA NonGen / NLR - RCRA - Non Generators / No Longer Regulated FEDLAND - Federal and Indian Lands. TSCA - Toxic Substances Control Act. TRIS - Toxic Chemical Release Inventory System. SSTS - Section 7 Tracking Systems. RAATS - RCRA Administrative Action Tracking System. PRP - Potentially Responsible Parties. APPENDIX G

Professional Qualifications

JON P. DAHLGREN
Vice President / Senior Geologist

EDUCATION

Beloit College, B.S. Geology, 1984

EXPERIENCE

1998 to Present

Senior Environmental Geologist, Environmental Division, TIM MILLER ASSOCIATES, INC. Responsible for environmental impact analysis, Phase I and 2 Environmental Site Assessments, soil, groundwater, and surface water sampling programs, water supply development, geotechnical reviews, and project management for zoning and land use impact analysis. Active or recent projects include the following:

Environmental Assessments

- Phase 1and 2 Site Assessments and site remediation (Phase 3) for a 2.77 acre former auto junk yard in Mamaroneck, New York. The site is proposed for reuse as a 96 unit residential condominium project. The site assessments included soil and groundwater sampling with Geoprobe and the subsequent excavation and off-site disposal of impacted soil and bedrock. The remediation resulted in the closure of the Spill Incident. The project included coordination with the NYSDEC, Westchester County Department of Health, the Village Board of Trustees and Planning Board.

- Professional consulting services for Town of Highlands, Board of Trustees related to MTBE impacted private wells. Completed a review and summary report of groundwater investigations and well monitoring data, attended meetings with the Planning Board and the public to discuss MTBE impact and local hydrogeologic conditions.

- Phase 1 and 2 Site Assessments for former NYCDEP sewage treatment plant, Mount Kisco, New York. The project site is proposed for development as a commercial office complex. Project involved working with the client, Village Planning Board and remediation contractor to develop a clean-up plan for mercury impacted sediments which remain on the site.

- Phase I and 2 Site Assessment, IKEA project, City of New Rochelle, New York. Managed the assessment of a 15.9 acre site of mixed commercial and residential uses for a City redevelopment proposal, including project coordination, design of sampling program, supervision of drilling, well installation and sample collection, data analysis, and report preparation.

- Phase I Environmental Baseline Surveys for nine U.S. Army Reserve Centers in Minnesota, Michigan, Indiana and Ohio, including, site visits, interviews, data collection and report preparation.

- Phase I and 2 Site Assessment at a former Putnam County Landfill and adjacent properties, including test pits, soil and groundwater sampling, project coordination, and report preparation.

- Phase 2 Site Assessments for four affordable housing sites on three city blocks, Brooklyn, New York. Project including test pits, soil sampling, and the removal and closure of eight abandoned UST's at a former gasoline station, found during the excavation. Worked closely with NYCDEP and NYCHPD to develop construction recommendations to minimize future exposure to on-site soils.

- Phase 2 Site Assessment, UJA Federation Camps, Town of Patterson, New York, including the completion of test pits and soil sampling.

- Completed Phase 1 Site Assessments for residential and commercial properties located throughout New York City, and Westchester, Rockland, Orange, Putnam, Ulster and Dutchess Counties. Successfully prepared or managed over 200 Phase 1 site assessments.

Tim Miller Associates, Inc., 10 North Street, Cold Spring, NY 10516 (845) 265-4400, fax 265-4418

Draft and Final Environmental Impact Statements

Project manager for SEQRA review process for residential and commercial projects, including:

- Sheldrake Estates, Village of Mamaroneck Managed the preparation of a DEIS and FEIS for a 96 unit condominium development on a former auto wrecking yard property. The project required a zoning change from manufacturing to residential. Project was granted a zoning change, adoption of SEQR Findings and preliminary Site Plan approval.
- Salem Hunt, Town of North Salem. Managed the preparation of a DEIS for a 55 unit cluster condominium development on 40 acres. Project is under SEQR review.
- Hillcrest Commons, Town of Carmel, New York. Project Manager for the preparation of a DEIS and FEIS for a residential development of 150 units of senior housing on a 107 acre site. The SEQR Findings for the project were adopted in August, 2006.
- Emery Ridge, Town of Cortlandt, New York Managed the SEQR review process and preparation of DEIS and FEIS for a 65 unit cluster development of single family homes and attached condominium units in a former mining site. Project was approved, constructed by Toll Brothers and is currently occupied.
- Henry Farm Estates, Town of Monroe, Project manager for the SEQR review process for a subdivision consisting of 66 single family homes, 50 multi-family senior townhouses, and limited retail and office use. Managed the preparation of DEIS, FEIS, and NYSDEC Water Supply Permit for community water supply.
- Harriman Commons, Town of Woodbury and Town of Monroe. Project Manager in the production of a DEIS and FEIS for a major retail development on 79 acres, located in two municipalities. Project has been constructed and is fully occupied.
- Chapel Farm, Riverdale, The Bronx, New York. Project Manager, Prepared subdivision application, and supporting CEQR documents for the Department of City Planning for a fourteen lot subdivision of single family homes.

Additional Projects

- Trump National Golf Club, Briarcliff Manor, New York. Manage on-going water quality sampling program of surface water and groundwater.
- Preparation of NYSDEC Water Supply Permit application for 116 unit residential project, Town of Monroe, New York.

1994 - 1997 Environmental Analyst, Vermont Agency of Transportation, Montpelier, Vermont. Managed environmental review, impact analysis and permitting of proposed transportation projects throughout the State of Vermont. Included the review and preparation of Environmental Impact Statements, Vermont Act 250 Land Use Permit applications, U.S. Army Corps of Engineers Nationwide Permit applications, Stream Alteration permits. Coordinated with Town Planning Boards, Town Boards, State and Federal regulatory officers, and the public. Represented VAOT at public hearings, interagency meetings.

1991 - 1994 Technical Environmental Analyst, Massachusetts Port Authority, Boston, Massachusetts. Provided technical support to Port Authority staff and ensure that Port Authority projects and activities remain in compliance with State and Federal regulatory requirements. Conducted Phase I and II Environmental Site Assessments of Port Authority property including portions of Hanscom Field, Concord, MA and port properties in Boston, MA. Managed a soil and contaminated media disposal contract for the rapid treatment or disposal of soil and water from Port Authority property. Conducted

environmental audits of Port Authority and tenant managed facilities, including Logan International Airport and Hanscom Field.

1990 - 1991 Environmental Geologist, Roux Associates, East Granby, CT.
Consulting geologist and project manager for environmental engineering firm specializing in environmental site assessments, groundwater studies, and groundwater remediation at petroleum service stations. Conducted site assessments, soil and groundwater sampling and regulatory project review.

1986 - 1989 Environmental Geologist, Mittelhauser Corporation Naperville, IL.
Consulting geologist and project manager for environmental firm specializing in groundwater studies, environmental site assessments, RCRA facility permitting and waste management. Conducted site assessments for major manufacturing firms, groundwater monitoring programs and regulatory permitting and support. Projects included:

- Groundwater Monitoring Plan, Muncie, Indiana. Participated in a groundwater monitoring plan for the major manufacturing plant's wastewater lagoons containing lead and acid waste. Conducted well installation, pumping tests and characterization of shallow aquifer.
- Groundwater Investigation, Cherry Valley, Illinois. Conducted a hydrogeologic assessment and extent of contamination study at a manufacturing plant. The sand and gravel aquifer was impacted with a number of chlorinated solvents.
- Groundwater and Site Assessment, Lemont, Illinois. Installed wells and collected groundwater samples at a major bulk chemical storage and transfer facility. Soil and groundwater was impacted with numerous volatile organic compounds.
- Site Assessment, East Chicago, Illinois. Participated in a site assessment of a former research laboratory containing buried laboratory waste. Study involved monitoring well installation, test pits and soil and groundwater sampling.

PROFESSIONAL AFFILIATIONS

Member: National Water Well Association

ANALYTICAL REPORT

Job Number: 420-153546-1

SDG Number: North 60, Mt. Pleasant, NY

Job Description: Tim Miller Associates, Inc.

For:
Tim Miller Associates, Inc.
10 North Street
Cold Spring, NY 10516

Attention: Jon Dahlgren

Debra Bayer
Customer Service Manager
dbayer@envirotestlaboratories.com
05/21/2019

NYSDOH ELAP does not certify for all parameters. EnviroTest Laboratories does hold certification for all analytes where certification is offered by ELAP unless otherwise specified in the Certification Information section of this report. Pursuant to NELAP, this report may not be reproduced, except in full, without written approval of the laboratory. EnviroTest Laboratories Inc. certifies that the analytical results contained herein apply only to the samples tested as received by our laboratory. All questions regarding this report should be directed to the EnviroTest Customer Service Representative.

EnviroTest Laboratories, Inc. Certifications and Approvals: NYSDOH 10142, NJDEP NY015, CTDOPH PH-0554

Job Narrative
420-J153546-1

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
Method 8260C: The instrument blank for analytical batch 131562 contained Methylene Chloride greater than the reporting limit (RL). The data have been qualified and reported.

No other analytical or quality issues were noted.

GC/MS Semi VOA
Method 8270D: Due to the high level of target analytes in sample 153546-6, napthalene is reported with an "E" flag indicating they exceed the calibration range. The reported value should be considered an estimate.

No other analytical or quality issues were noted.

GC Semi VOA
No analytical or quality issues were noted.

Metals
No analytical or quality issues were noted.

General Chemistry
No analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

METHOD SUMMARY

Client: Tim Miller Associates, Inc.

Job Number: 420-153546-1
SDG Number: North 60, Mt. Pleasant, NY

Description	Lab Location	Method	Preparation Method
Matrix: Solid			
Inductively Coupled Plasma - Atomic Emission Spectrometry	EnvTest	SW846 6010C	
Microwave Assisted Acid Digestion of Sediments,	EnvTest		SW846 3051A
Hg in Solids & Semi-solids	EnvTest	SW846 7471B	
Mercury in Solid or Semi-Solid Waste (Manual Cold	EnvTest		SW846 7471B
Organochlorine Pesticides by Gas Chromatography	EnvTest	SW846 8081B	
Microwave Extraction	EnvTest		SW846 3546
Polychlorinated Biphenyls (PCBs) by Gas Chromatography	EnvTest	SW846 8082A	
Microwave Extraction	EnvTest		SW846 3546
Volatile Organic Compounds by GC/MS	EnvTest	SW846 8260C	
Closed System Purge & Trap Low Level	EnvTest		EPA 5035-L
Semivolatile Compounds by GC/MS	EnvTest	SW846 8270D	
Microwave Extraction	EnvTest		SW846 3546

DATA REPORTING QUALIFIERS

Client: Tim Miller Associates, Inc.

Job Number:
Sdg Number: North 60, Mt. Pleasant, NY

Lab Section	Qualifier	Description
GC/MS VOA		
	U	The analyte was analyzed for but not detected at or above the lowest stated limit.
GC/MS Semi VOA		
	D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
	E	Result exceeded calibration range, secondary dilution required.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	U	The analyte was analyzed for but not detected at or above the lowest stated limit.
GC Semi VOA		
	U	The analyte was analyzed for but not detected at or above the lowest stated limit.
Metals		
	U	The analyte was analyzed for but not detected at or above the lowest stated limit.

The following analytes are Not Part of the ELAP scope of accreditation:

Sulfur, Tungsten, Bicarbonate Alkalinity, 7 Day BOD 5210C, 28 Day BOD, Soluble BOD, Carbon Dioxide, Carbonate Alkalinity, CBOD Soluble, Chlorine, Cyanide (WAD), Ferrous Iron, Ferric Iron, Total Nitrogen, Total Organic Nitrogen, Dissolved Oxygen, pH, Solids (Fixed), Solids (Percent), Solids (Percent Moisture), Solids (Percent Volatile), Solids (Volatile Suspended), Temperature, TKN (Soluble), COD (Soluble), Total Inorganic Carbon, 2-Aminopyridine, 3-Picoline, 1-Methyl-2-pyrrilidinone, Aziridine, Dimethyl sulfoxide, 1-Chlorohexane, 1,2,4,5-Tetramethylbenzene, 4-Ethyl toluene, p-Diethylbenzene, Iron Bacteria, Salmonella, Sulfur Reducing Bacteria, & UOD (Ultimate Oxygen Demand).

The following analytes are Not Part of ELAP Potable Water scope of accreditation:

Ammonia (SM 4500NH3G), TKN (351.2), Phosphorus (365.3), Nitrate-Nitrite (10-107-4-1C, 353.2), m-Xylene & p-Xylene (502.2, 524), o-Xylene (502.2, 524), Sulfide (SM4500SD), Acenaphthene (525.2), Acenaphthylene (525.2), Fluoranthene (525.2), Fluorene (525.2), Phenanthrene (525.2), Anthracene (525.2), Pyrene (525.2), Benzo[a]anthracene (525.2), Benzo[b]fluoranthene (525.2), Benzo[g,h,i]perylene (525.2), Benzo[k]fluoranthene (525.2), Indeno[1,2,3-cd]pyrene (525.2), & Dibenz(a,h)anthracene (525.2).

The following analytes are Not Part of ELAP Solid and Hazardous Waste scope of accreditation:

Ammonia (SM 4500NH3G), TKN (351.2), Phosphorus (365.3), 1,2-Dichloro-1,1,2-trifluoroethane (8260), & Chlorodifluoromethane (8260).

The following analytes are Not Part of ELAP Non Potable Water scope of accreditation:

Dissolved Organic Carbon (5310C), Mecoprop (8151A), MCPA (8151A), Propylene Glycol (8015D).

Definitions and Glossary

Client: Tim Miller Associates, Inc. Job Number:

Sdg Number: North 60, Mt. Pleasant, NY

Abbreviation	These commonly used abbreviations may or may not be present in this report.
%R	Percent Recovery
DL, RA, RE	Indicates a Dilution, Reanalysis or Reextraction.
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit - an estimate of the minimum amount of a substance that an analytical process can reliably detect. A MDL is analyte- and matrix-specific and may be laboratory-dependent.
ND	Not detected at the reporting limit (or MDL if shown).
QC	Quality Control
RL	Reporting Limit - the minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence.
RPD	Relative Percent Difference - a measure of the relative difference between two points.

Login Number: **153546**

Question	T/F/NA	Comment
Samples were collected by ETL employee as per SOP-SAM-1	NA	
The cooler's custody seal, if present, is intact.	NA	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is recorded.	True	2.9C
Cooler Temp. is within method specified range.(0-6 C PW, 0-8 C NPW, or BAC <10 C	True	
If false, was sample received on ice within 6 hours of collection.	NA	
Based on above criteria cooler temperature is acceptable.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	NA	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

ANALYTICAL REPORT

Job Number: 420-154215-1

SDG Number: North 60, Mt. Pleasant, NY

Job Description: Tim Miller Associates, Inc.

For:
Tim Miller Associates, Inc.
10 North Street
Cold Spring, NY 10516

Attention: Ms. Maureen Fisher

Debra Bayer
Customer Service Manager
dbayer@envirotestlaboratories.com
05/30/2019

cc: Jon Dahlgren

NYSDOH ELAP does not certify for all parameters. EnviroTest Laboratories does hold certification for all analytes where certification is offered by ELAP unless otherwise specified in the Certification Information section of this report. Pursuant to NELAP, this report may not be reproduced, except in full, without written approval of the laboratory. EnviroTest Laboratories Inc. certifies that the analytical results contained herein apply only to the samples tested as received by our laboratory. All questions regarding this report should be directed to the EnviroTest Customer Service Representative.

EnviroTest Laboratories, Inc. Certifications and Approvals: NYSDOH 10142, NJDEP NY015, CTDOPH PH-0554

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS Semi VOA
No analytical or quality issues were noted.

GC Semi VOA
No analytical or quality issues were noted.

Metals
Method 6010C: The LCS for barium did not meet the range of acceptable recoveries. The matrix spike for the batch was within control limits for both the MS and LCS limits. Therefore, the data as reprted without qualification as per item 210 A. 1.1.2.1 c of the ELAP certification manual.

No other analytical or quality issues were noted.

General Chemistry
No analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

DATA REPORTING QUALIFIERS

Client: Tim Miller Associates, Inc.

Job Number:

Sdg Number: North 60, Mt. Pleasant, NY

Lab Section	Qualifier	Description
GC/MS Semi VOA		
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	U	The analyte was analyzed for but not detected at or above the lowest stated limit.
GC Semi VOA		
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	U	The analyte was analyzed for but not detected at or above the lowest stated limit.
	X	Surrogate exceeds the control limits
Metals		
	*	LCS or LCSD exceeds the control limits
	U	The analyte was analyzed for but not detected at or above the lowest stated limit.

The following analytes are Not Part of the ELAP scope of accreditation:

Sulfur, Tungsten, Bicarbonate Alkalinity, 7 Day BOD 5210C, 28 Day BOD, Soluble BOD, Carbon Dioxide, Carbonate Alkalinity, CBOD Soluble, Chlorine, Cyanide (WAD), Ferrous Iron, Ferric Iron, Total Nitrogen, Total Organic Nitrogen, Dissolved Oxygen, pH, Solids (Fixed), Solids (Percent), Solids (Percent Moisture), Solids (Percent Volatile), Solids (Volatile Suspended), Temperature, TKN (Soluble), COD (Soluble), Total Inorganic Carbon, 2-Aminopyridine, 3-Picoline, 1-Methyl-2-pyrrilidinone, Aziridine, Dimethyl sulfoxide, 1-Chlorohexane, 1,2,4,5-Tetramethylbenzene, 4-Ethyl toluene, p-Diethylbenzene, Iron Bacteria, Salmonella, Sulfur Reducing Bacteria, & UOD (Ultimate Oxygen Demand).

The following analytes are Not Part of ELAP Potable Water scope of accreditation:

Ammonia (SM 4500NH3G), TKN (351.2), Phosphorus (365.3), Nitrate-Nitrite (10-107-4-1C, 353.2), m-Xylene & p-Xylene (502.2, 524), o-Xylene (502.2, 524), Sulfide (SM4500SD), Acenaphthene (525.2), Acenaphthylene (525.2), Fluoranthene (525.2), Fluorene (525.2), Phenanthrene (525.2), Anthracene (525.2), Pyrene (525.2), Benzo[a]anthracene (525.2), Benzo[b]fluoranthene (525.2), Benzo[g,h,i]perylene (525.2), Benzo[k]fluoranthene (525.2), Indeno[1,2,3-cd]pyrene (525.2), & Dibenz(a,h)anthracene (525.2).

The following analytes are Not Part of ELAP Solid and Hazardous Waste scope of accreditation:

Ammonia (SM 4500NH3G), TKN (351.2), Phosphorus (365.3), 1,2-Dichloro-1,1,2-trifluoroethane (8260), & Chlorodifluoromethane (8260).

The following analytes are Not Part of ELAP Non Potable Water scope of accreditation:

Dissolved Organic Carbon (5310C), Mecoprop (8151A), MCPA (8151A), Propylene Glycol (8015D).

Definitions and Glossary

Client: Tim Miller Associates, Inc. Job Number:

Sdg Number: North 60, Mt. Pleasant, NY

Abbreviation	These commonly used abbreviations may or may not be present in this report.
%R	Percent Recovery
DL, RA, RE	Indicates a Dilution, Reanalysis or Reextraction.
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit - an estimate of the minimum amount of a substance that an analytical process can reliably detect. A MDL is analyte- and matrix-specific and may be laboratory-dependent.
ND	Not detected at the reporting limit (or MDL if shown).
QC	Quality Control
RL	Reporting Limit - the minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence.
RPD	Relative Percent Difference - a measure of the relative difference between two points.

Login Number: **154215**

Question	T/F/NA	Comment
Samples were collected by ETL employee as per SOP-SAM-1	NA	
The cooler's custody seal, if present, is intact.	NA	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is recorded.	True	0.2 C
Cooler Temp. is within method specified range.(0-6 C PW, 0-8 C NPW, or BAC <10 C	True	
If false, was sample received on ice within 6 hours of collection.	NA	
Based on above criteria cooler temperature is acceptable.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	NA	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

NYSDOH ELAP does not certify for all parameters. EnviroTest Laboratories does hold certification for all analytes where certification is offered by ELAP unless otherwise specified in the Certification Information section of this report. Pursuant to NELAP, this report may not be reproduced, except in full, without written approval of the laboratory. EnviroTest Laboratories Inc. certifies that the analytical results contained herein apply only to the samples tested as received by our laboratory. All questions regarding this report should be directed to the EnviroTest Customer Service Representative.

EnviroTest Laboratories, Inc. Certifications and Approvals: NYSDOH 10142, NJDEP NY015, CTDOPH PH-0554

METHOD SUMMARY

Client: Tim Miller Associates, Inc.

Job Number: 420-155982-1
SDG Number: North 60, Mt Pleasant, NY

Description	Lab Location	Method	Preparation Method
Matrix: Solid			
Inductively Coupled Plasma - Atomic Emission Spectrometry	EnvTest	SW846 6010C	
Microwave Assisted Acid Digestion of Sediments,	EnvTest		SW846 3051A
Hg in Solids & Semi-solids	EnvTest	SW846 7471B	
Mercury in Solid or Semi-Solid Waste (Manual Cold	EnvTest		SW846 7471B
Semivolatile Compounds by GC/MS	EnvTest	SW846 8270D	
Microwave Extraction	EnvTest		SW846 3546

Lab References:

EnvTest = EnviroTest

Method References:

SW846 = "Test Methods For Evaluating Solid Waste, Physical/Chemical Methods", Third Edition, November 1986 And Its Updates.

METHOD / ANALYST SUMMARY

Client: Tim Miller Associates, Inc.

DATA REPORTING QUALIFIERS

Client: Tim Miller Associates, Inc.

Job Number:
Sdg Number: North 60, Mt Pleasant, NY

Lab Section	Qualifier	Description
GC/MS Semi VOA		
	D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	U	The analyte was analyzed for but not detected at or above the lowest stated limit.
Metals		
	^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA or MRL standard: Instrument related QC exceeds the control limits.
	U	The analyte was analyzed for but not detected at or above the lowest stated limit.

The following analytes are Not Part of the ELAP scope of accreditation:

Sulfur, Tungsten, Bicarbonate Alkalinity, 7 Day BOD 5210C, 28 Day BOD, Soluble BOD, Carbon Dioxide, Carbonate Alkalinity, CBOD Soluble, Chlorine, Cyanide (WAD), Ferrous Iron, Ferric Iron, Total Nitrogen, Total Organic Nitrogen, Dissolved Oxygen, pH, Solids (Fixed), Solids (Percent), Solids (Percent Moisture), Solids (Percent Volatile), Solids (Volatile Suspended), Temperature, TKN (Soluble), COD (Soluble), Total Inorganic Carbon, 2-Aminopyridine, 3-Picoline, 1-Methyl-2-pyrrilidinone, Aziridine, Dimethyl sulfoxide, 1-Chlorohexane, 1,2,4,5-Tetramethylbenzene, 4-Ethyl toluene, p-Diethylbenzene, Iron Bacteria, Salmonella, Sulfur Reducing Bacteria, & UOD (Ultimate Oxygen Demand).

The following analytes are Not Part of ELAP Potable Water scope of accreditation:

Ammonia (SM 4500NH3G), TKN (351.2), Phosphorus (365.3), Nitrate-Nitrite (10-107-4-1C, 353.2), m-Xylene & p-Xylene (502.2, 524), o-Xylene (502.2, 524), Sulfide (SM4500SD), Acenaphthene (525.2), Acenaphthylene (525.2), Fluoranthene (525.2), Fluorene (525.2), Phenanthrene (525.2), Anthracene (525.2), Pyrene (525.2), Benzo[a]anthracene (525.2), Benzo[b]fluoranthene (525.2), Benzo[g,h,i]perylene (525.2), Benzo[k]fluoranthene (525.2), Indeno[1,2,3-cd]pyrene (525.2), & Dibenz(a,h)anthracene (525.2).

The following analytes are Not Part of ELAP Solid and Hazardous Waste scope of accreditation:

Ammonia (SM 4500NH3G), TKN (351.2), Phosphorus (365.3), 1,2-Dichloro-1,1,2-trifluoroethane (8260), & Chlorodifluoromethane (8260).

The following analytes are Not Part of ELAP Non Potable Water scope of accreditation:

Dissolved Organic Carbon (5310C), Mecoprop (8151A), MCPA (8151A), Propylene Glycol (8015D).

Definitions and Glossary

Client: Tim Miller Associates, Inc.

Job Number:

Sdg Number: North 60, Mt Pleasant, NY

Abbreviation	These commonly used abbreviations may or may not be present in this report.
%R	Percent Recovery
DL, RA, RE	Indicates a Dilution, Reanalysis or Reextraction.
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit - an estimate of the minimum amount of a substance that an analytical process can reliably detect. A MDL is analyte- and matrix-specific and may be laboratory-dependent.
ND	Not detected at the reporting limit (or MDL if shown).
QC	Quality Control
RL	Reporting Limit - the minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence.
RPD	Relative Percent Difference - a measure of the relative difference between two points

Login Number: **155982**

Question	T/F/NA	Comment
Samples were collected by ETL employee as per SOP-SAM-1	NA	
The cooler's custody seal, if present, is intact.	NA	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is recorded.	True	1.7C
Cooler Temp. is within method specified range.(0-6 C PW, 0-8 C NPW, or BAC <10 C	True	
If false, was sample received on ice within 6 hours of collection.	NA	
Based on above criteria cooler temperature is acceptable.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	NA	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

DATA REPORTING QUALIFIERS

Client: Tim Miller Associates, Inc.

Job Number:
Sdg Number: North 60 Mt.Pleasant

Lab Section	Qualifier	Description
GC/MS VOA		
	U	The analyte was analyzed for but not detected at or above the lowest stated limit.
GC/MS Semi VOA		
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	U	The analyte was analyzed for but not detected at or above the lowest stated limit.
GC Semi VOA		
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	U	The analyte was analyzed for but not detected at or above the lowest stated limit.
Metals		
	U	The analyte was analyzed for but not detected at or above the lowest stated limit.

The following analytes are Not Part of the ELAP scope of accreditation:

Sulfur, Tungsten, Bicarbonate Alkalinity, 7 Day BOD 5210C, 28 Day BOD, Soluble BOD, Carbon Dioxide, Carbonate Alkalinity, CBOD Soluble, Chlorine, Cyanide (WAD), Ferrous Iron, Ferric Iron, Total Nitrogen, Total Organic Nitrogen, Dissolved Oxygen, pH, Solids (Fixed), Solids (Percent), Solids (Percent Moisture), Solids (Percent Volatile), Solids (Volatile Suspended), Temperature, TKN (Soluble), COD (Soluble), Total Inorganic Carbon, 2-Aminopyridine, 3-Picoline, 1-Methyl-2-pyrrilidinone, Aziridine, Dimethyl sulfoxide, 1-Chlorohexane, 1,2,4,5-Tetramethylbenzene, 4-Ethyl toluene, p-Diethylbenzene, Iron Bacteria, Salmonella, Sulfur Reducing Bacteria, & UOD (Ultimate Oxygen Demand).

The following analytes are Not Part of ELAP Potable Water scope of accreditation:

Ammonia (SM 4500NH3G), TKN (351.2), Phosphorus (365.3), Nitrate-Nitrite (10-107-4-1C, 353.2), m-Xylene & p-Xylene (502.2, 524), o-Xylene (502.2, 524), Sulfide (SM4500SD), Acenaphthene (525.2), Acenaphthylene (525.2), Fluoranthene (525.2), Fluorene (525.2), Phenanthrene (525.2), Anthracene (525.2), Pyrene (525.2), Benzo[a]anthracene (525.2), Benzo[b]fluoranthene (525.2), Benzo[g,h,i]perylene (525.2), Benzo[k]fluoranthene (525.2), Indeno[1,2,3-cd]pyrene (525.2), & Dibenz(a,h)anthracene (525.2).

The following analytes are Not Part of ELAP Solid and Hazardous Waste scope of accreditation:

Ammonia (SM 4500NH3G), TKN (351.2), Phosphorus (365.3), 1,2-Dichloro-1,1,2-trifluoroethane (8260), & Chlorodifluoromethane (8260).

The following analytes are Not Part of ELAP Non Potable Water scope of accreditation:

Dissolved Organic Carbon (5310C), Mecoprop (8151A), MCPA (8151A), Propylene Glycol (8015D).

Definitions and Glossary

Client: Tim Miller Associates, Inc. Job Number:

Sdg Number: North 60 Mt.Pleasant

Abbreviation	These commonly used abbreviations may or may not be present in this report.
%R	Percent Recovery
DL, RA, RE	Indicates a Dilution, Reanalysis or Reextraction.
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit - an estimate of the minimum amount of a substance that an analytical process can reliably detect. A MDL is analyte- and matrix-specific and may be laboratory-dependent.
ND	Not detected at the reporting limit (or MDL if shown).
QC	Quality Control
RL	Reporting Limit - the minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence.
RPD	Relative Percent Difference - a measure of the relative difference between two points.

Question	T/F/NA	Comment
Samples were collected by ETL employee as per SOP-SAM-1	NA	
The cooler's custody seal, if present, is intact.	NA	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is recorded.	True	1.7C
Cooler Temp. is within method specified range.(0-6 C PW, 0-8 C NPW, or BAC <10 C	True	
If false, was sample received on ice within 6 hours of collection.	NA	
Based on above criteria cooler temperature is acceptable.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	NA	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True
